CALIFORNIA 91311·U.S.A

SUPERSCOPE DESIGN AND SERVICE

Using superior design and selected high grade components, SUPERSCOPE has created the ultimate in stereo sound. Only original SUPERSCOPE parts can insure that your SUPERSCOPE product will continue to perform to the specifications for which it is famous.

Parts for your SUPERCOPE stereo are generally available within 72 hours throughout the nation via a toll-free line to our National Parts Depot in California. The sales professionals who take yourcall immediately refer to their own desk top computer terminal and can quickly determine the availability and price information you require. If for some reason, your order should exceed our available stock, we usually can instantly provide an alternate replacement part or current delivery information. When the order is placed and confirmed, the computer simultaneously generates "hard copy" orders at the distribution center. As hard copies come directly from the computer to the national parts depot, your requested stock is assembled and prepared for shipment and placed on the first available carrier for delivery to you.

ORDERING PARTS

Phone orders will eliminate mail delays, and we encourage the use of this method. If you order by mail, use SUPERSCOPE parts order forms which are available from our National Parts Depot located at the following address:

SUPERSCOPE NATIONAL PARTS DEPARTMENT
20525 Nordhoff Street
Chatsworth, California 91311
Phone: 1-800-423-5108
1-213-998-9333

The following information must be supplied to eliminate delays in processing your order:

1. Complete address.
2. Complete part numbers.
3. Complete description of parts.
4. Model number for which part is required (indicate SUPERSCOPE).
5. Account number (for account customers only).

Direct consumers will be provided with the current retail prive quotation on available parts in order to advise them of the cost of the parts and shipping.

OVERSEAS PARTS ORDERING

Parts may also be ordered from the following overseas addresses:

CANADA

Superscope Canada, Ltd.
3710 Nashua Drive
Mississauga
Ontario, Canada L4V1M5

AUSTRALIA

Superscope (Australasia) Pty., Ltd.
32 Cross Street (P.O. Box 604)
Brookvale 2100 N.S.W.
Australia

JAPAN

Marantz Japan, Inc.
3622 Kamitsuruma
Sagamihara Shi
Kanagawa, Japan

EUROPE

Superscope Europe, S.A.
Avenue Leopold III, 2
7120 Peronnes-Lez-Binche
Belgium

Marantz France
Rue Louis Armand 9
92600 Asnieres
Hauts-de-Seine
France

Marantz Audio U.K. Ltd.
London Road, 203
Staines
Middlesex
England

Superscope GmbH
Max-Planck-Strasse 22
D-6072 Dreieich 1
West Germany

All of the above locations are fully equipped to take care of your total service needs. Because various countries have differing configuration requirements, it is necessary that you contact the service facility in your particular country. In the event that there is no service location listed for your country, please contact the nearest facility for the necessary assistance.

SPECIFICATIONS

GENERAL

Dimensions (W x H x D) . . . . . 29.3 x 8.2 x 19.5 cm
(11⅝ x 3¼ x 7¾ inches)
Weight . . . . . 3.7 kg (7 lb 15 oz) with batteries
3.3 kg (7 lb 4 oz) without batteries
Power Requirements
DC: . . . . . Four UM-1, "D" size flashlight batteries
(Rechargeable pack: Model RBD-1)
AC: For Europe . . . . 220/110 V, 50 Hz, 13 W
For USA & Canada . . . . 120 V, 60 Hz, 13 W
Number of Semiconductors
Transistor 22
Diode 25
IC 12
Terminals
Input: Microphone 2
(one for each channel)
Plug Type . . . . . ¼'
Input Sensitivity . . . . . −72 dBV
Impedance . . . . . 10 kΩ
Line (Aux) 2
(one for each channel)
Plug Type . . . . . RCA Pin
Input Sensitivity . . . . . −30 dBV
Impedance . . . . . 50 kΩ
Output: Line 2
(one for each channel)
Plug Type . . . . . RCA Pin
Output Level . . . . . 800 mV
Impedance . . . . . 1.5 kΩ
DIN (Rec./Play) 1
Plug Type . . . . . DIN
Input Sensitivity . . . . . 20 mV
Input Impedance . . . . . 27 kΩ
Output Level . . 800 mV at ±1.9 VU
Output Impedance . . . . . 1.5 kΩ
EXT. Speaker 2
Plug Type . . . . . Mini
Power Output . . . . . 1200 mW x 2
Stereo Headphone 1
Plug Type . . . . . Phone
Impedance . . . . . 8 Ω
AC Inlet 1
DC Jack 1

TAPE RECORDING SECTION

Tape . . . . . PHILIPS type Compact Cassette Tape
Recording System . . . . . Quarter track stereo, AC Bias
Erasing System . . . . . Half track, AC Erase
Rewind & Fast Forward Time 110 sec/C-60
Number & Type of Motor . . . . . One DC servo

1. FEATURES

1.1 Simultaneous 3-Head Recording System

Besides erase and Record/Playback heads, the Model CD-330 featrures a high-performance monitor head which is newly developed. Thanks to this monitor head, you can check for the recorded sound while carrying out recording. By setting TAPE/SOURCE switch to SOURCE position, you can directly monitor program source as well.

*The ordinary, playbacking is possible, regardless of TAPE/SOURCE switch's position.

1.2 Fully Selectable Automatic Record Level and Peak Limiter

According to program source, three selections are possible – ARL, LIMITER and MANUAL.

1.3 One-Touch Recording

The tape recorder can be set to the recording.mode just by pressing the REC button. There is no need to press the PLAY button.

1.4 Automatic Total Mechanism Shut Off

When the tape comes to the end in any of the playback, record, fast forward and rewind modes of operation, the tape tension-controlled auto-stopper actuates to automatically release the locked pushbutton. It takes 2 to 6 seconds to release the pushbutton after the tape is wound up; note that the interval becomes longer with decrease of the power line voltage. Locked PAUSE pushbutton prevents operation of the auto-stopper.

1.5 Dual Flywheel Mechanism

Applying two flywheels turning round oppositely to each other, the strength caused by wobble or others is canceled each other, and stable performance of fly-wheel rotation is always assured.

1.6 Cue and Review Pushbuttons

By depressing the CUE or REVIEW pushbutton, the tape can be fast forward or rewind while monitoring recorded sound. This feature is very convenient for easy reference and indexing or repeated playback. By depressing the CUE or REVIEW pushbutton with the PLAY pushbutton leaving depressed, the pinch roller is separated from the capstan, allowing the tape to be run at a high speed.

1.7 Four-Way Power Supply

The Model CD-330 can be operated by four power sources: dry cells (UM-1 x 4), AC power line, external DC power supply (DCA-6, sold separately) and re-chargeable battery pack (RBD-1, sold separately). To prevent the possibility of being overloaded by two or more power sources, the contacts of the AC Jack (J001) and external DC Jack (J002) automatically select only one power supply in the following priority: 1. AC pow-er line; 2. external DC power supply; 3. dry batteries (rechargeable battery pack). Thanks to its built-in recharge circuit, even when not operated, the Model DC-330 can recharge the rechargeable battery pack as long as it is connected to AC power line or external DC power supply.

2. SERVICE NOTE

As can be seen from the circuit diagram, the chassis of Model CD-330 consists of following units. Each unit mounted on a printed circuit board is described with the square enclosed by bold dotted line on the circuit diagram.

Pre-Amp, Power Supply, Switch, Input Select, Dolby . . . . . mounted on P.W. Board P101
Terminals . . . . . mounted on P.W. Board P501
Power Select (N Version) . . . mounted on P.W. Board P901
Mic. Att. . . . . mounted on P.W. Board P701
Headphone . . . . . mounted on P.W. Board P601
Rechargeable . . . . . mounted on P.W. Board P801
Fuse (UC Version) . . . . . mounted on P.W. Board P950

3. TEST EQUIPMENT REQUIRED FOR SERVICING REPLACEMENT

For measuring checking the Model CD-330, the following instruments and materials are necessary.

- Audio Oscillator (af OSC)
- Attenuator (600 Ω)
- VTVM
- Distortion Meter
- Oscilloscope
- Bandpass Filter
- Wow and Flutter Meter
- Torque Meter (Cassette Type)
- Digital Frequency Counter
- Blank Tape (Completely erased with bulk eraser)

  TAK AC-211 (Normal)
  TAK AC-511 (CrO_2)
  SONY CS-30 (Fe-Cr)

  NOTE: If any doubt is noted in a measured value, used new tape.

- Test Tapes (New Tape)

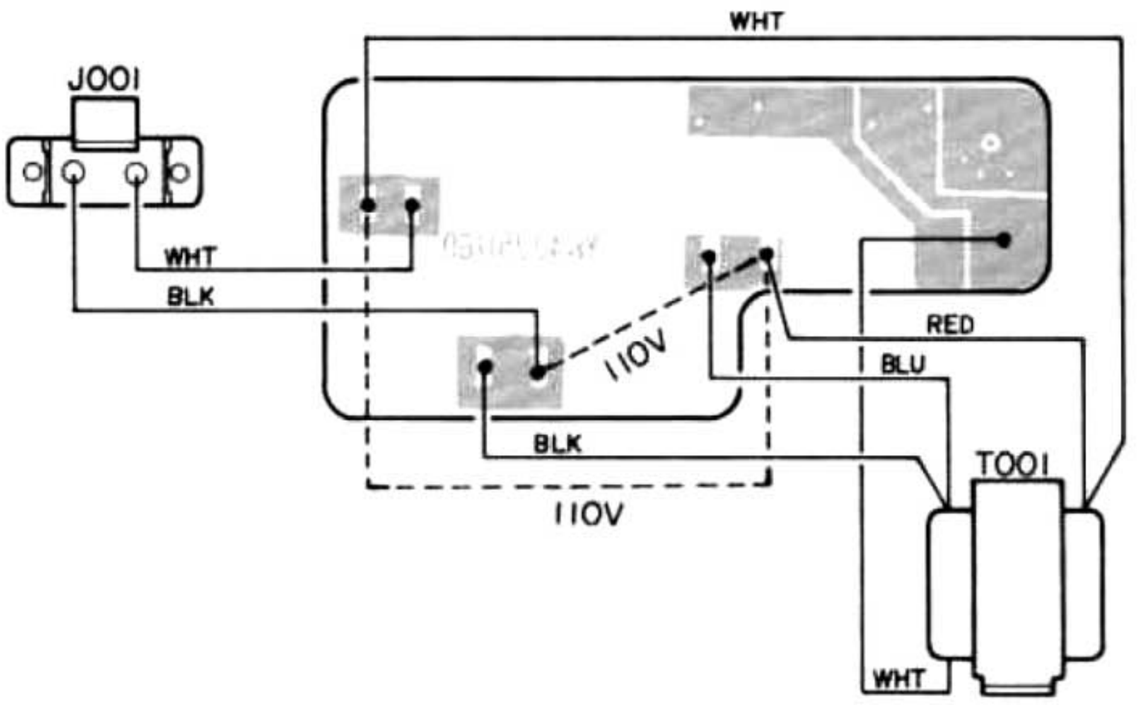
MTT-111	Wow and Flutter, Tape Speed
MTT-112	Measurement of Output Level, Signal-to-Noise Ratio
MTT-150	Adjustment of Output Level
MTT-116U	Frequency Response (for Normal)
MTT-116K	Frequency Response (for CrO_2, Fe-Cr)
MTT-121	Crosstalk
MTT-141	Channel Separation
MTT-115C	Playback EQ, Azimuth

BIAS and EQ switches setting in accordance with tape used are as follows:

	Bias	EQ
Normal	Low	120μs
CrO_2	High	70μs
Fe-Cr	Low	70μs

CHANGE OF POWER TRANSFORMER PRIMARY VOLTAGE (for Europe Model Only)

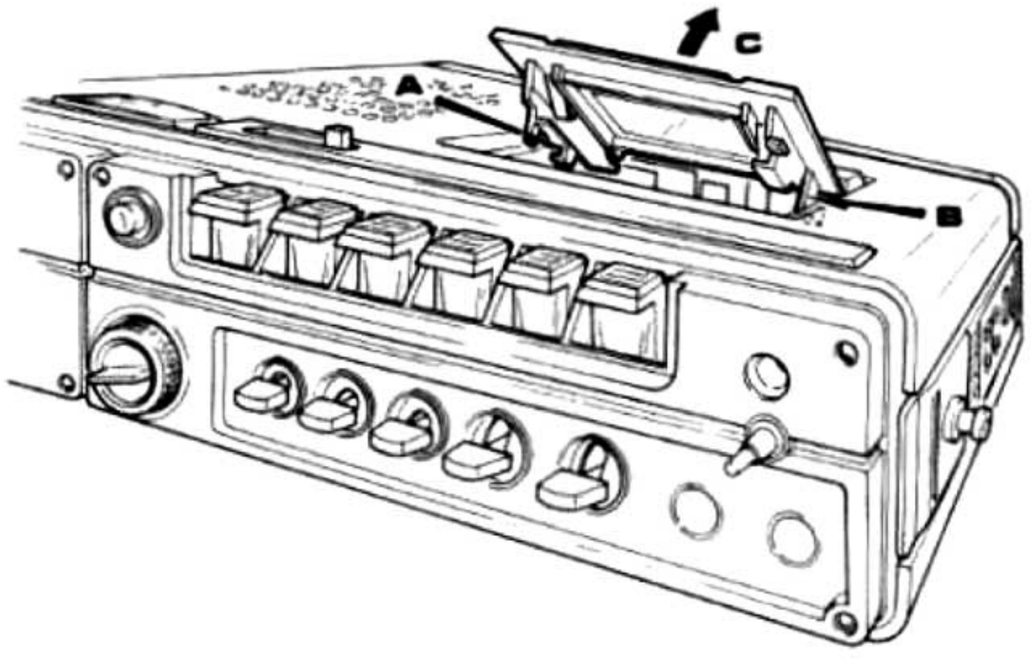
The CD-330 is wired for 220V line voltage. It can be operated with 110V AC by changing the power transformer lead wire as illustrated.



4. BOTTOM CASE COVER AND CHASSIS DISASSEMBLING PROCEDURES

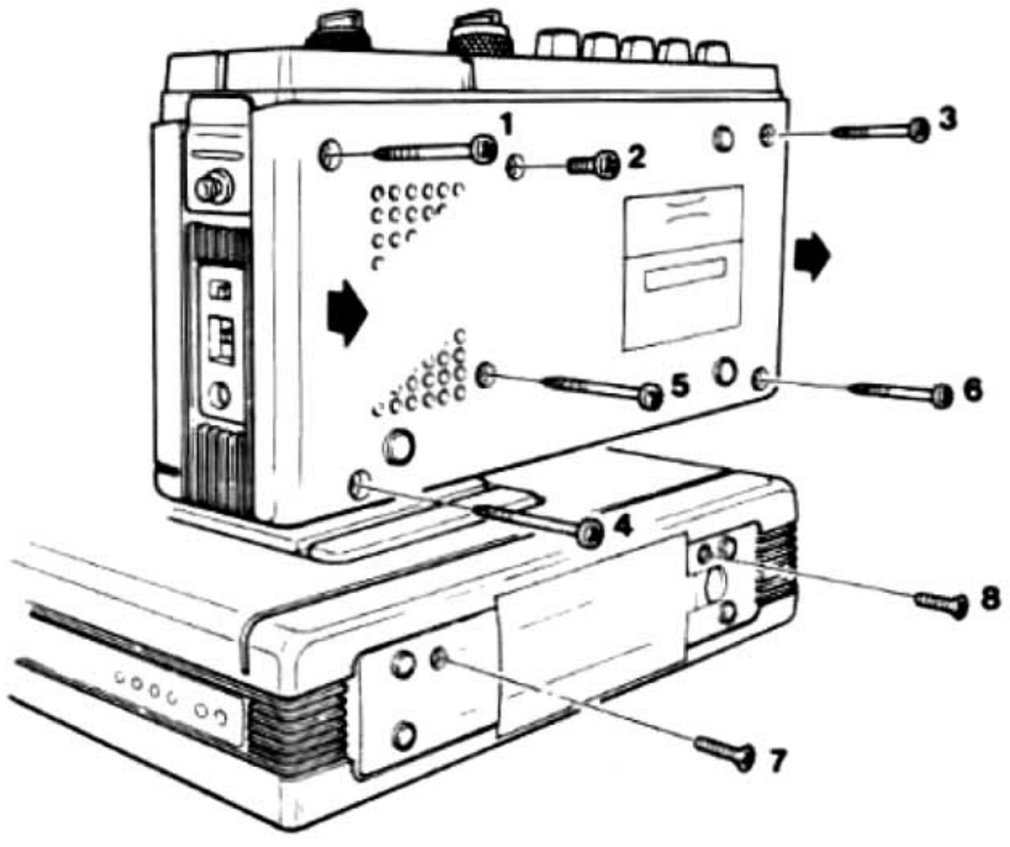
4-1 Removing Cassette Cover

Pull the cover pushing **A** and **B** in the direction of an arrow. Then the cover will be removed.



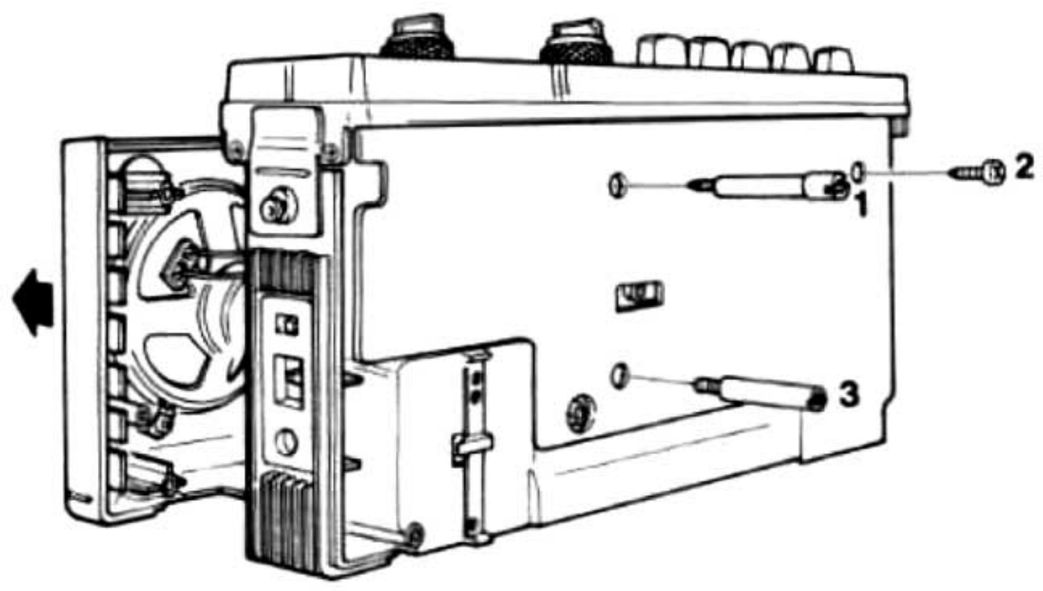
4-2 Removing Rear Cover

Remove six screws **1** to **6** at the rear. Remove screws **7** and **8** at the bottom. Pull the rear cover in the direction of an arrow, and it will be removed.



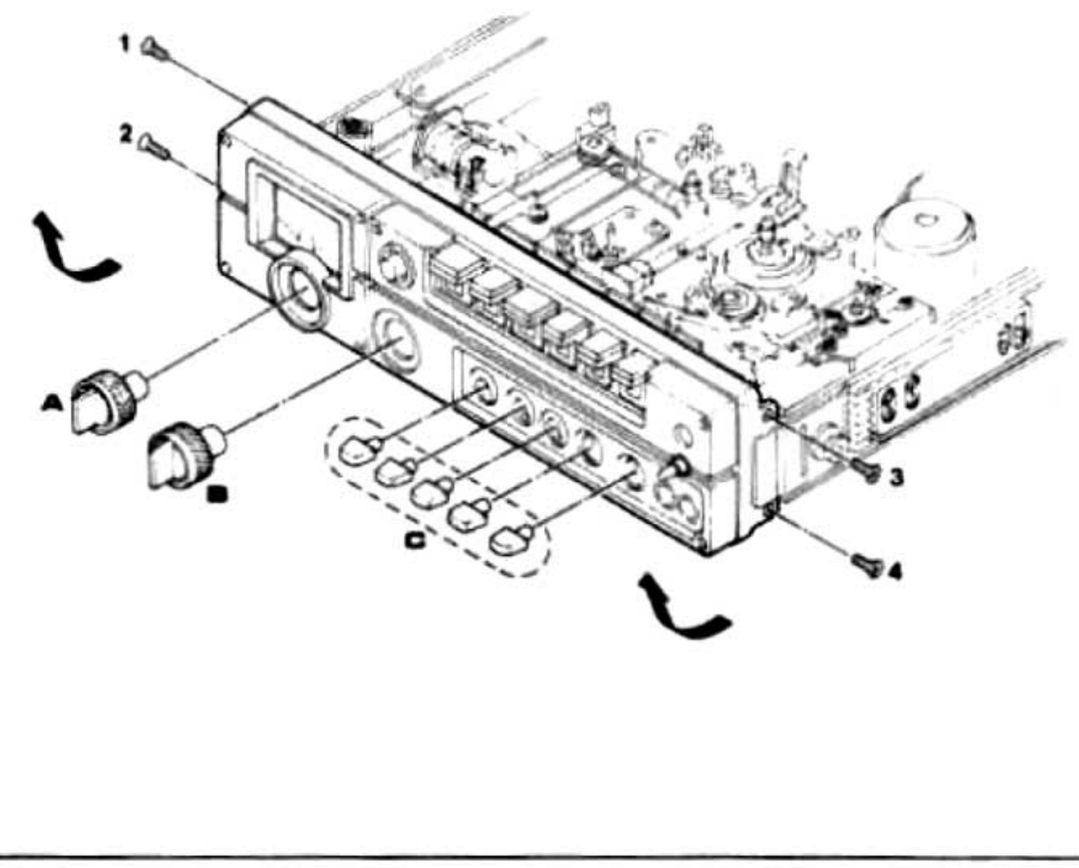
4-3 Removing Top Case

Remove three screws **1** to **3**. Pull the top case in the direction of an arrow, and it will be removed. At that time, remove the connection wire (soldered) of the speaker.



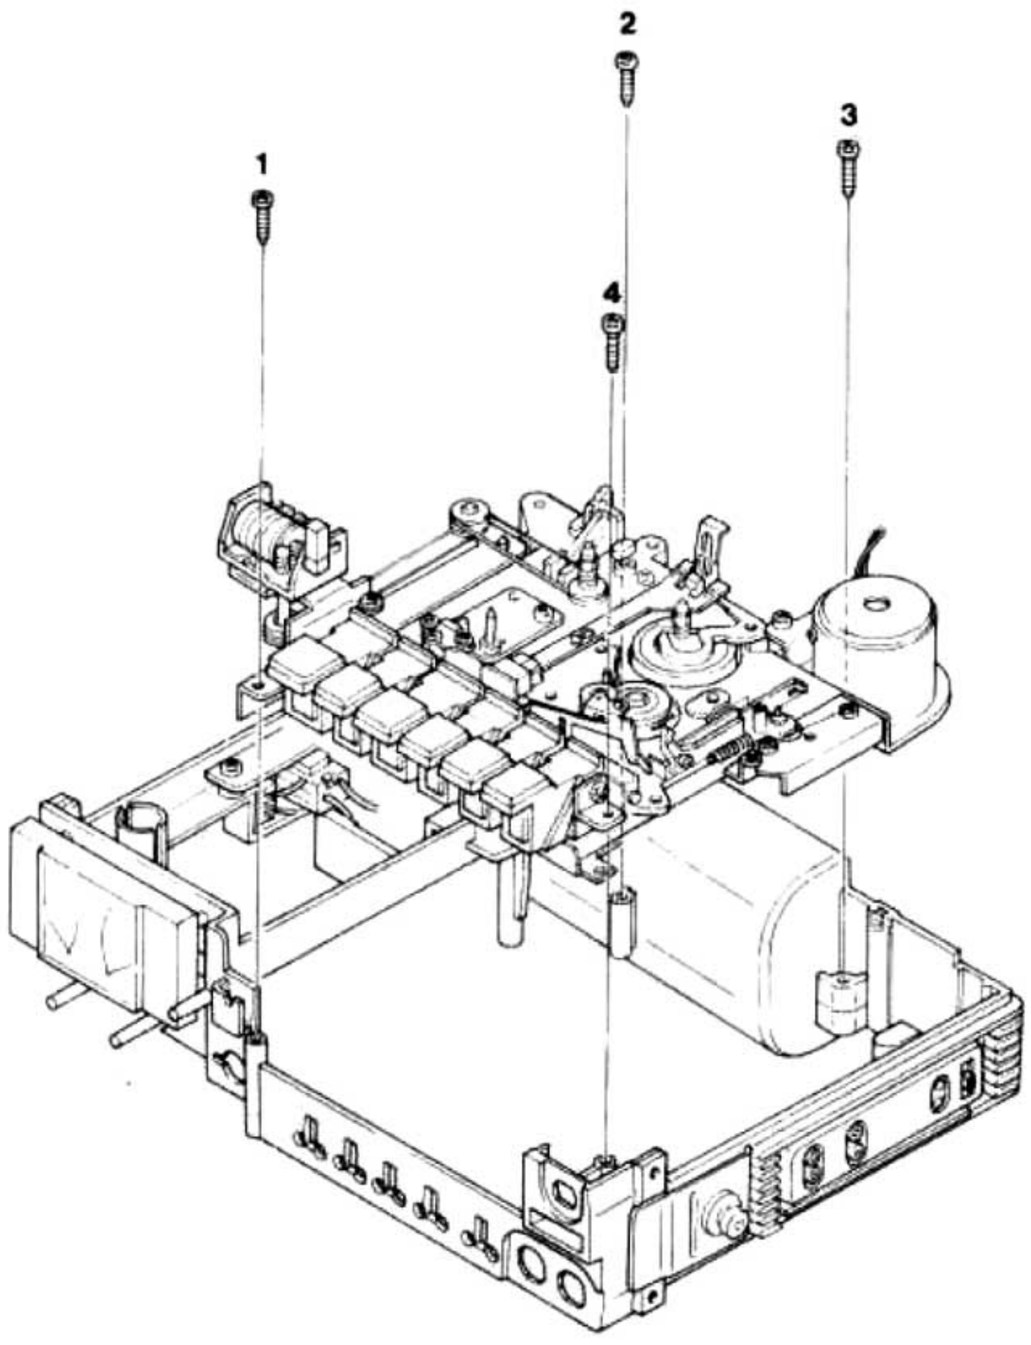
4-4 Removing Front Case

Remove the dials **A** and **B** and remove four knobs. Remove four screws **1** to **4** from the sides. Remove the front case in the direction of an arrow. At that time, it is recommended to lower the control buttons before the front case is removed since it is difficult to remove it due to catching of it by the control buttons.



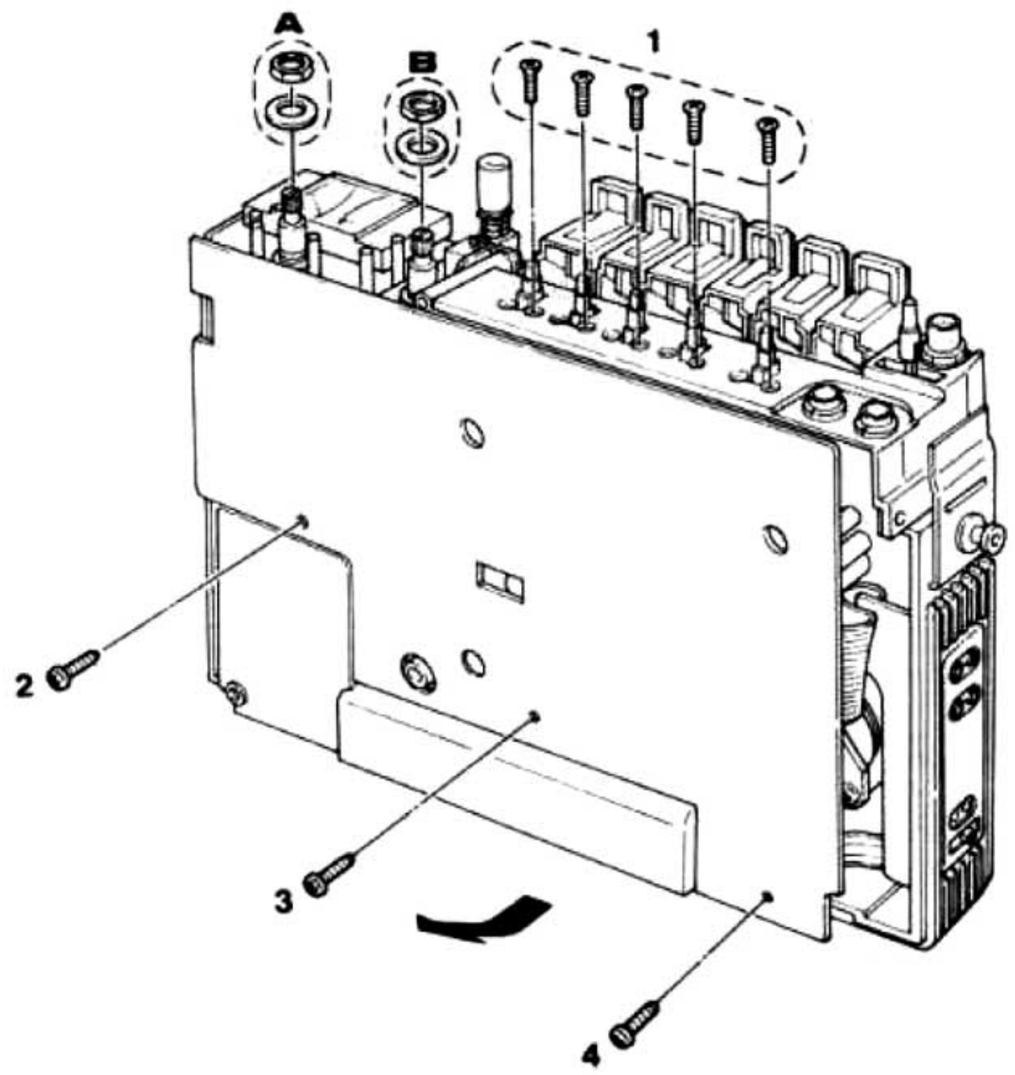
4-5 Removing PW Board

Remove four screws **1** and then remove nuts **A** and **B**. Remove screws **2** to **4** from the PW board. Remove the PW board in the direction of an arrow.



4-6 Removing Mechanism

Remove four screws **1** to **4**, and the mechanism will be removed.



5. ADJUSTMENT AND MEASUREMENT (AUDIO) INSTRUCTIONS

Precautions: Prior to any adjustment or measurement, clean the head slits with gauze containing alcohol or carbon tetrachloride, and fully demagetize the heads, capstan and similar parts.

5-A MECHANICAL ADJUSTMENTS

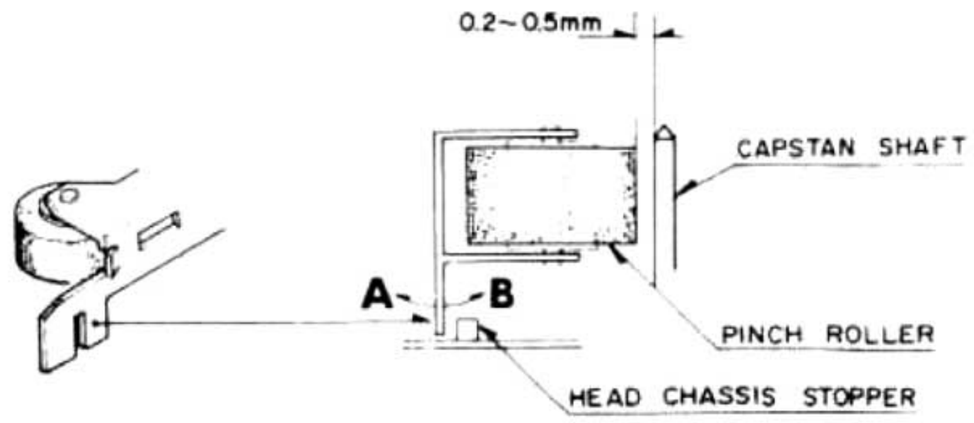
5A-1 Play Operation Check

(1) Timing Check

- Depress button PLAY, and check to make sure that the take-up reel rotates first and then that the pinch roller rotates. Simultaneous rotation of these reel and roller is not acceptable.

  NOTE: For this check, slowly depress the button without tape mounted regardless of locking condition.

- Slowly depress button PLAY, and the take-up reel will start rotation. At that time, check to make sure that a clearance between the pinch roller and capstan is less than 0.5 mm.



(2) Timing Adjustment

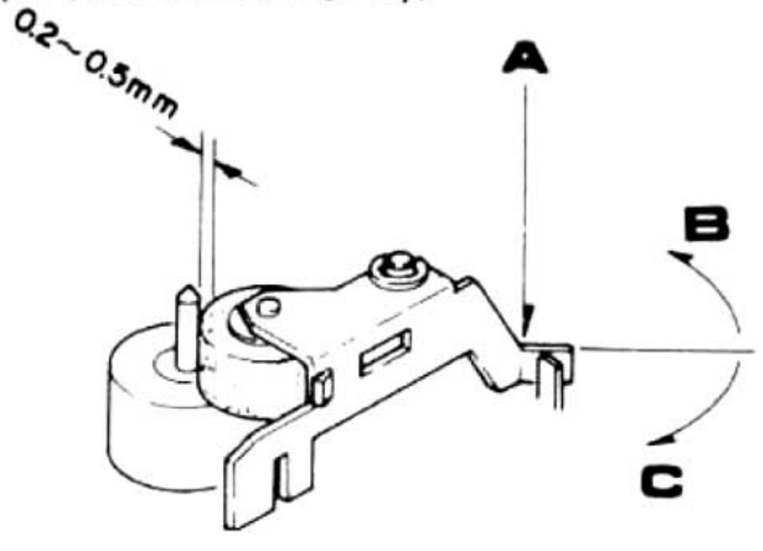
If out of specification, bend the part of the pinch roller bracket which faces the head chassis stopper. In the figure shown above, bend the part in the direction of **A** to decrease the clearance. To increase the clearance, bend the part in the direction of **B**.

NOTE: After adjustment, check to be sure that the pinch roller bracket does not contact the head chassis stopper in PLAY mode.

5A-2 Pause Timing

Depress button PLAY, slowly depress button PAUSE, and the take-up reel will pause. At that time, check to ensure that a clearance bétween the pinch roller and capstan ranges from 0.2 to 0.5 mm. If out of the range, adjust a bending angle of the pinch roller bracket arm (view **A**).

NOTE: To increase a clearance between the pinch roller and capstan, decrease the angel (in the direction of **C** in the figure). To decrease the clearance, increase the angle (in the direction of **B**).

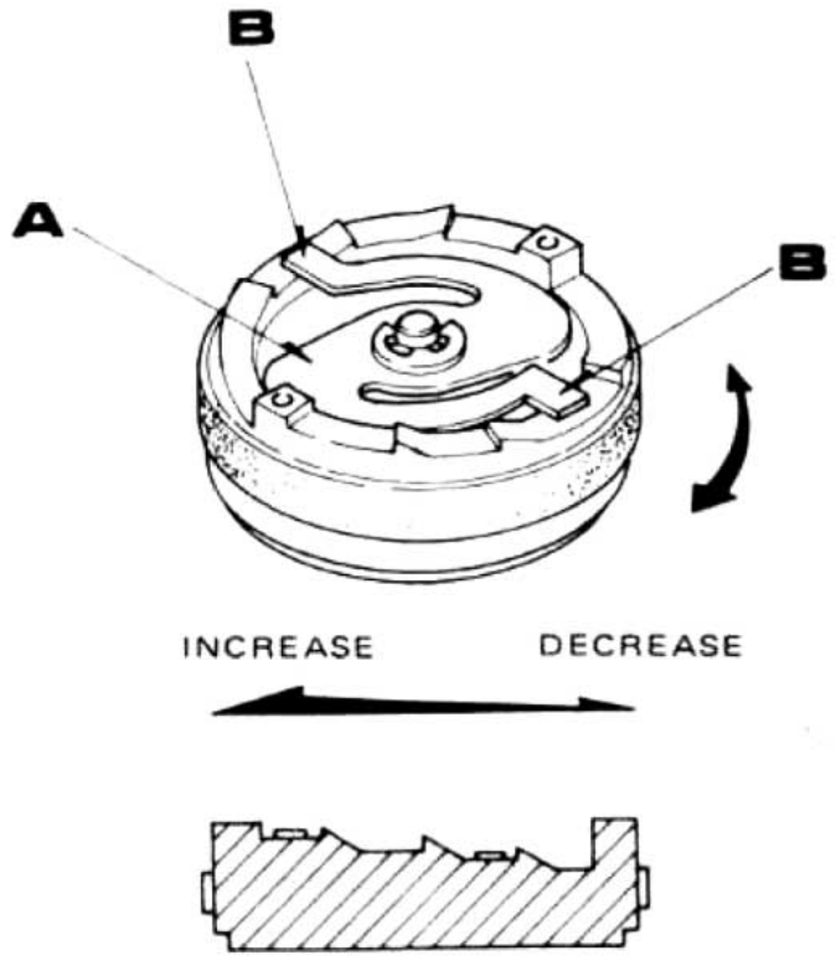


5A-3 Torque Adjustment (FF, REW)

Set the extended parts (**B** in the figure shown above) of the torque adjustment leaf spring (**A** in the figure) of the FF/REW idler on any one of three stepping parts of the idler.

NOTE: To increase torque, set the extended parts to the stepping part of "INCREASE" and to decrease it, set those to the stepping part of "DECREASE".

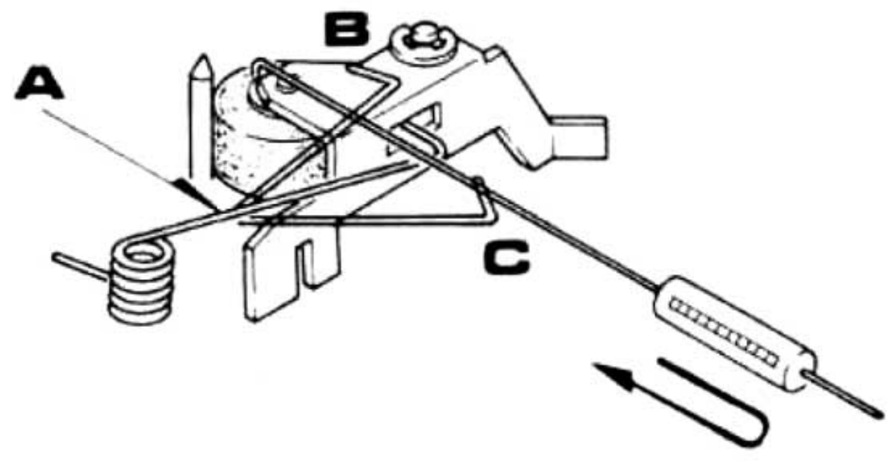
Adjusting ragne: 70 ~ 110 g.cm.



5A-4 Pinch Roller Pressing Force

As shown above, measure pressing force of the pinch roller using a gauge. For measurement, proceed as follows. Pull the pinch roller off the capstan shaft as shown with the arrow, and gradually release it to the capstan. Just when the pinch roller starts rotating, read an indication of a gauge. Pressing force must range in 300 g ±50 g. If our of the range, bend the pinch roller spring in the direction of **B** or **C** at section **A** shown above.

NOTE: To increase pressing force, bend the said spring in the direction of **B**, and to decrease the force, bend it in the direction of **C**.



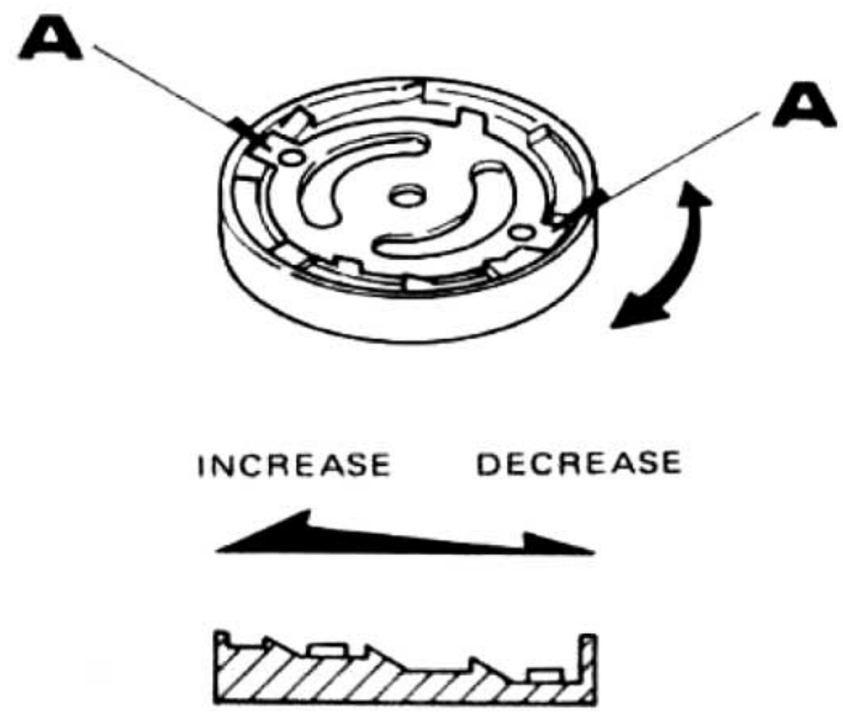
5A-5 Torque Adjustment (PLAY)

Mount the extended parts **A** (two) of the disc leaf spring on any one of the stepping parts of the idler Adjusting range: 40 to 70 g.cm.

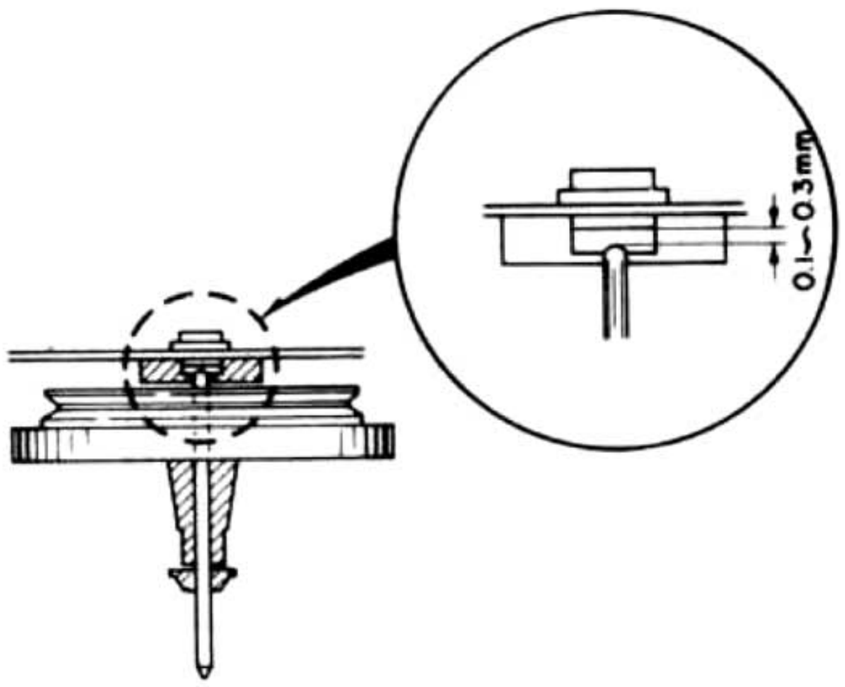
NOTE:

(1) To increase torque, mount the extended parts on "INCREASE" and to decrease torque, mount them on "DECREASE".

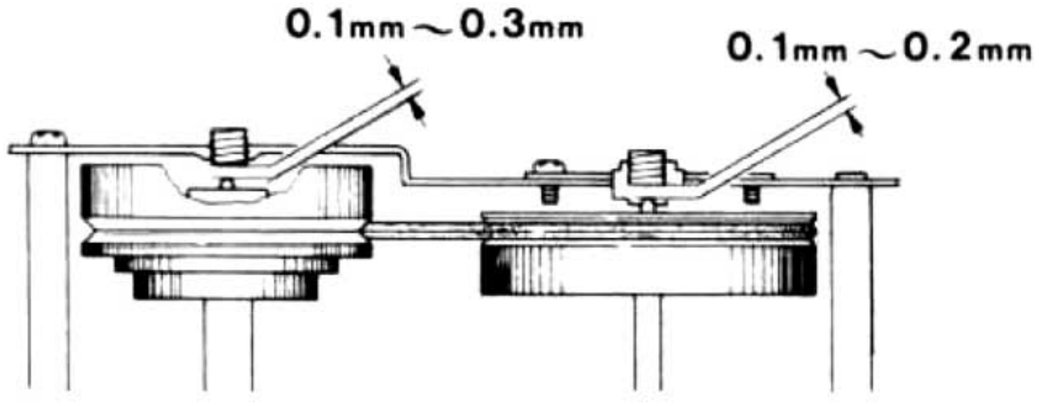
(2) Check the take-up clutch for slipping. When the reel base is paused, the wheel must smoothly rotate. The wheel, when irregularly rotating or stopping, is not acceptable.



5A-6 Flywheel Thrust Adjustment

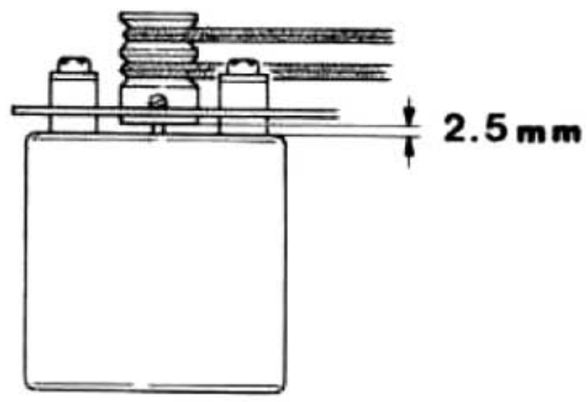


Adjust a clearance between the capstan tail end and thrust bearing to a range from 0.1 to 0.3 mm as shown. Adjust the thrust screw in the flywheel bracket using a Philips screwdriver. Since the clearance cannot be directly measured, capture a distance in an axial step of the flywheel with the sensibility. After adjustment has completed, secure the thrust screw with the screw lock.



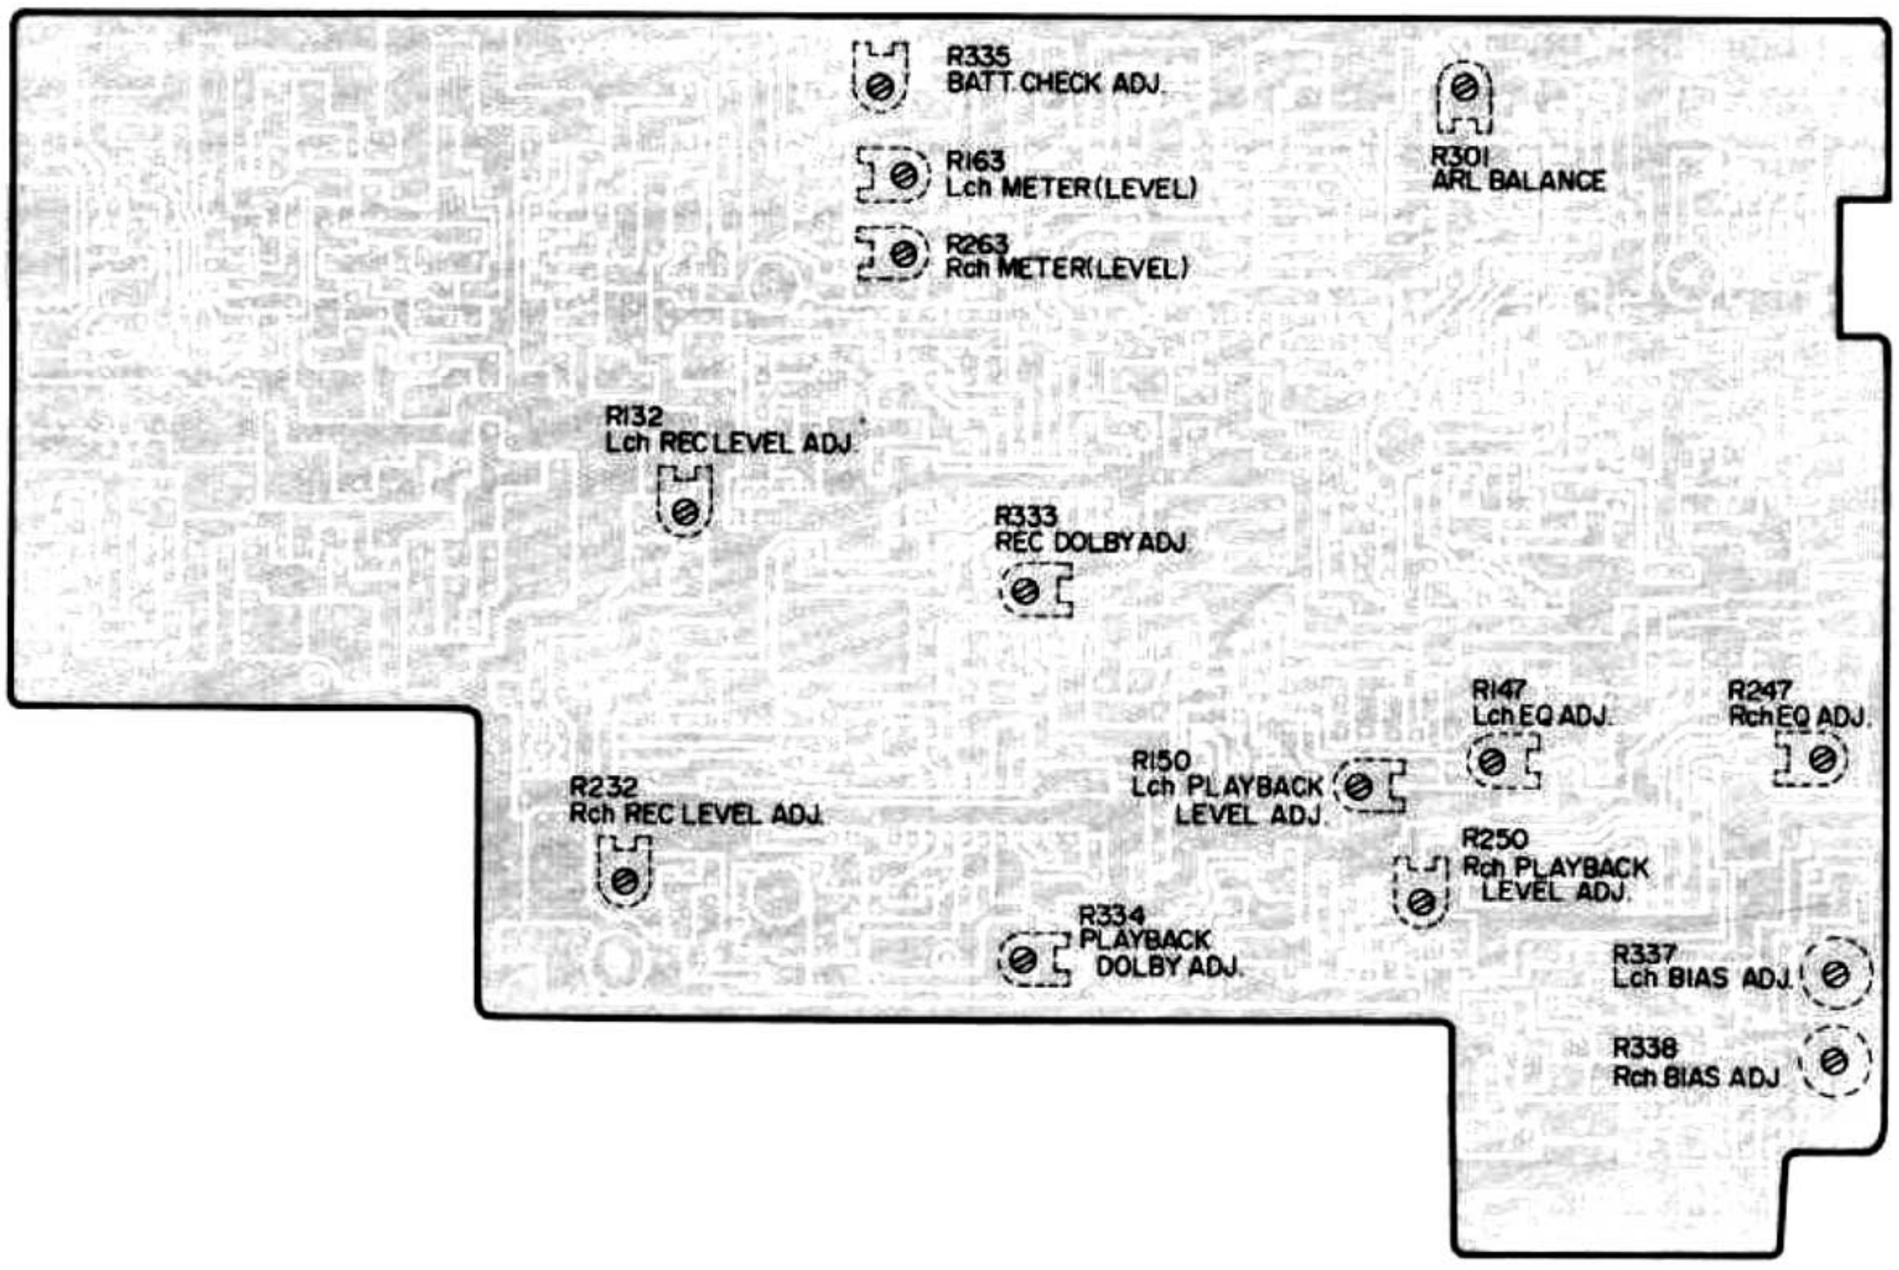
5A-7 Installation of Motor Pulley

Check to ensure that a clearance between the DC motor and pulley is 3.1 mm. If out of specification, reposition the pulley as shown.



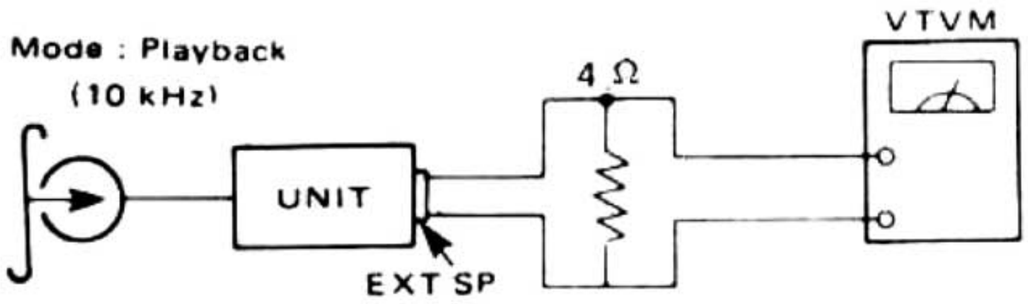
5A-8 Tape Speed Adjustment

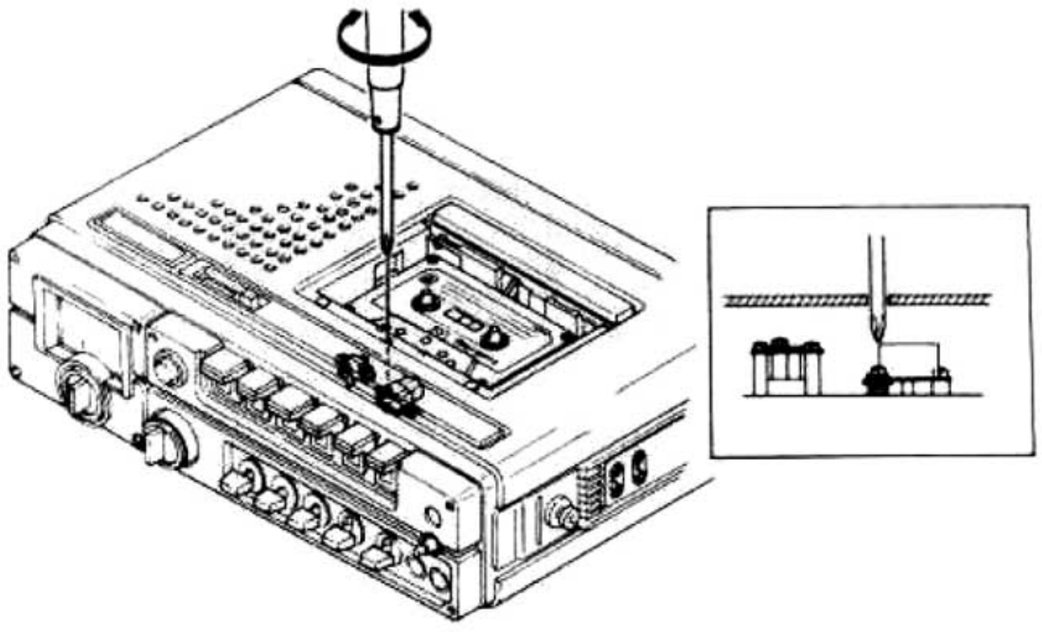
Mount 3 kHz test tape on the set, and check to make sure that the meter pointer of a measuring instrument (frequency counter) indicates 3000 Hz ±3% or less as specified. If tape speed exceeds the high limit, replace the pulley with a pulley of parts No. 4367262050. If the speed is lower than the low limit, replace it with a pulley of parts No. 4367262040.



5B-1 Azimuth Adjustment

Play back the 10 kHz or 6.3 kHz standard alignment tape. Adjust the azimuth adjusting screw 836 N. After adjustment, repeatedly start and stop the tape several times to ensure no azimuth deviation.





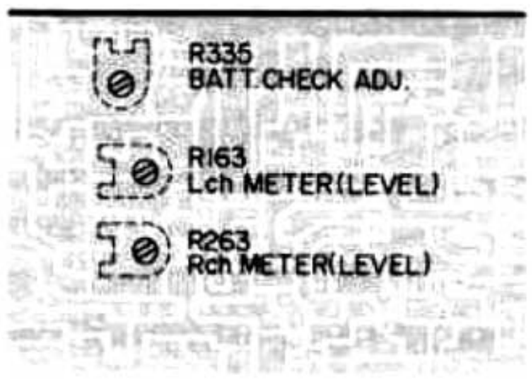
5B-2 Meter Adjustment

SET UP

1. Power voltage: DC 4.5 V
2. Batt. check switch position: ON

PROCEDURES

1. Set up the unit for the playback mode of operation.
2. Apply an external DC 4.5 V source to the DC 6 V jack.
   Adjust R335 so that the meter reading is 0VU point of scale.



5B-3 Head Azimuth Adjustment

SET UP

1. Power voltage:
   - 50/60Hz voltage rated for the unit to be used in a market country.
   - DC 6 V
2. MONITOR switch position: TAPE
3. Output terminal: LINE Output
4. EQ switch position: 120 μS
5. Test tape used: MTT-115C

PROCEDURES

1. Play the 10 kHz portion of the test tape MTT-115C back. Adjust the head azimuth adjusting screw for maximum VTVM read.
2. If the peak output reads of the right and left channels are different, set the screws to obtain the mechanical center between the peaks.

CAUTION

After adjustment, repeat the playback and stop setting a few times to make certain of no head azimuth deviation.

5B-4 Tape Speed Adjustment

SET UP

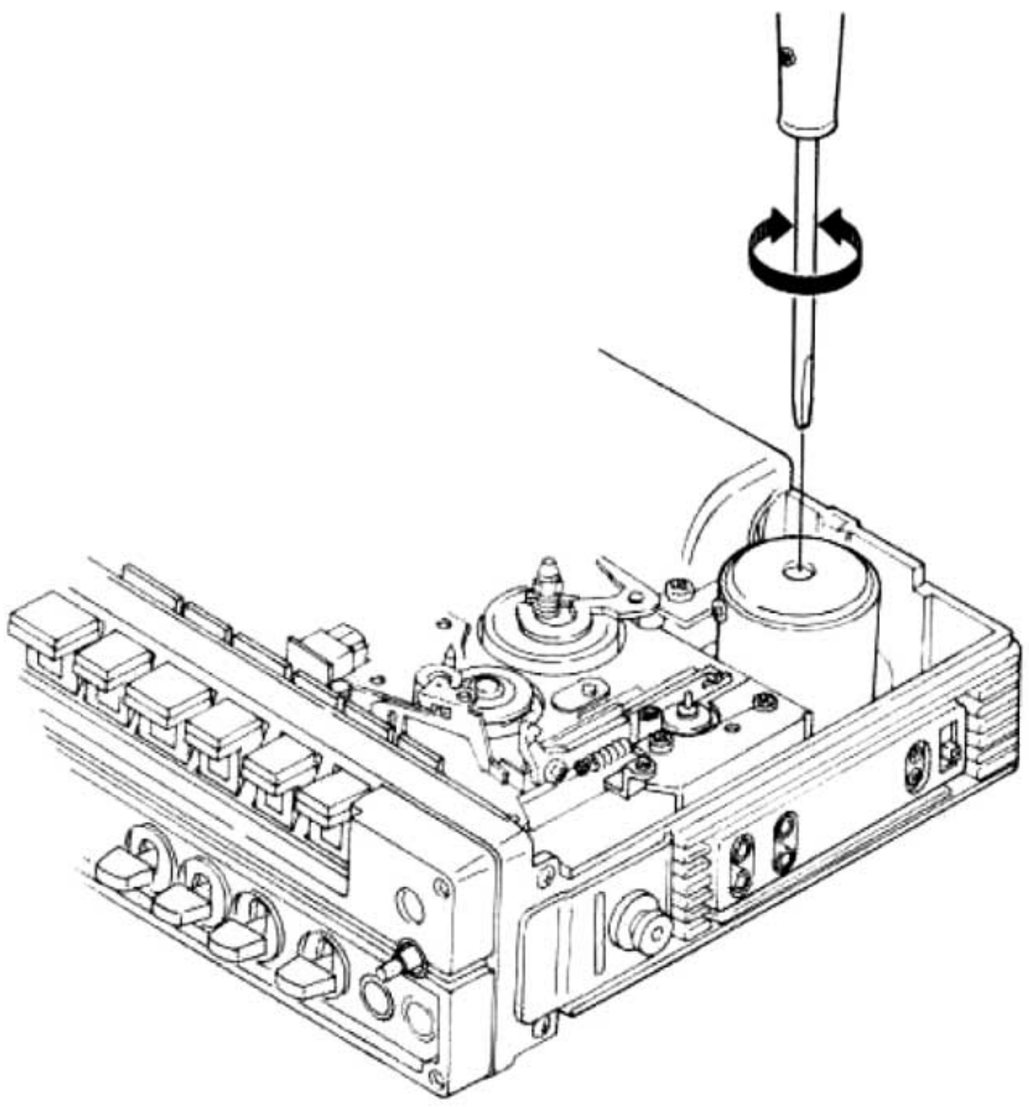
1. Power voltage:
   - 50/60 Hz AC voltage rated for the unit to be used in a market country.
   - DC 6 V
2. MONITOR switch position: TAPE
3. Output terminal: LINE Output
4. Test tape used: MT-111 (3 kHz tone)
5. Unit position: Horizontal

PROCEDURE

Play the mid position of the test tape MTT-111 back. Adjust the tape speed adjusting semi-fixed resistor 3000 ±5 Hz counter indication.

CAUTIONS

1. For adjustment the unit should be set up in the normal operating condition.
2. Do not proceed the semi-fixed resistor more turns than needed.
3. Do not proceed with adjustment after the unit.
4. If a strong shock or similar vibration is applied to the unit after adjustment, make certain that the measured tape speed had not changed.
5. If the speed deviation occurs, perform the adjustment again.
6. Be careful that the counter may indicate a wrong value because of too low counter level.
7. Before adjustment, allow for 30 seconds or more after depressing of the PLAY pushbutton.



5B-6 Playback Output Level Adjustment

SET UP

1. Power voltage:
   - 50/60 Hz voltage rated for the unit to be used in a market country.
   - DC 6 V
2. MONITOR switch position: TAPE
3. Output terminal: Terminal No. 8, 9 of Dolby IC Q109
4. EQ switch position: 120 μS
5. Test tape used: MTT-150

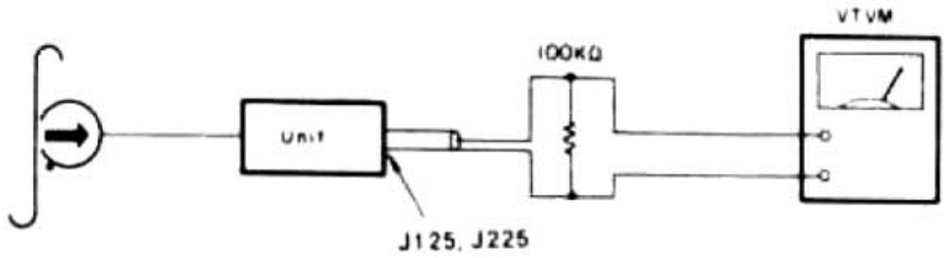
PROCEDURES

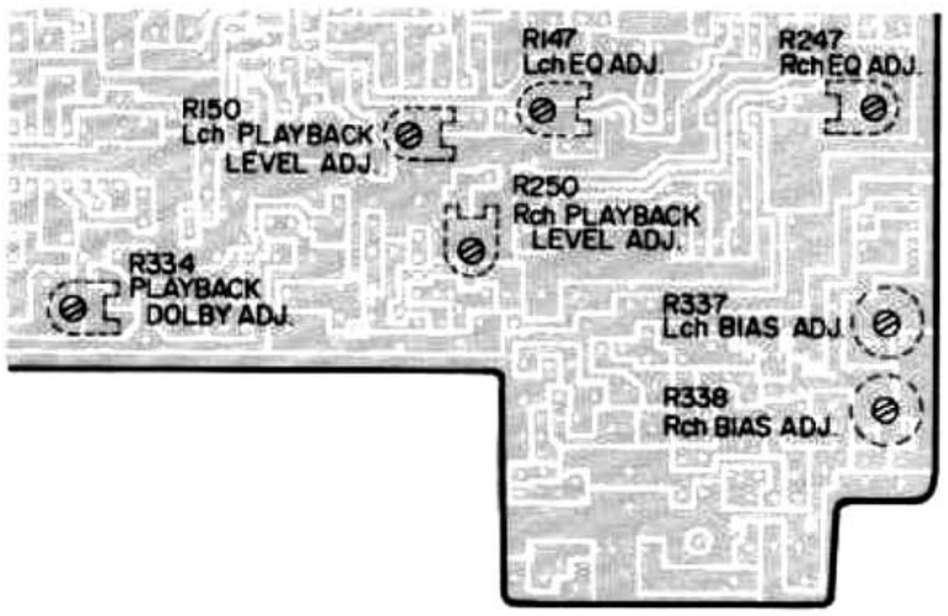
1. Play the test tape MTT-150 back. Adjust R150 and R250 (20 kΩ each) for 775 mV playback output level.
2. Proceed both for the right and left channels in the same manner.

CAUTION

This adjustment should be performed after the one for the playback equalizer. If the playback equalizer is adjusted after the playback output adjustment, the playback output should be readjusted.

Mode: playback





5B-5 Playback Equalizer Adjustment

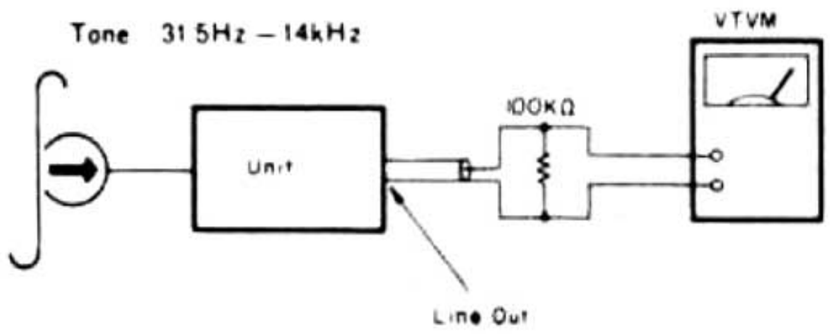
SET UP

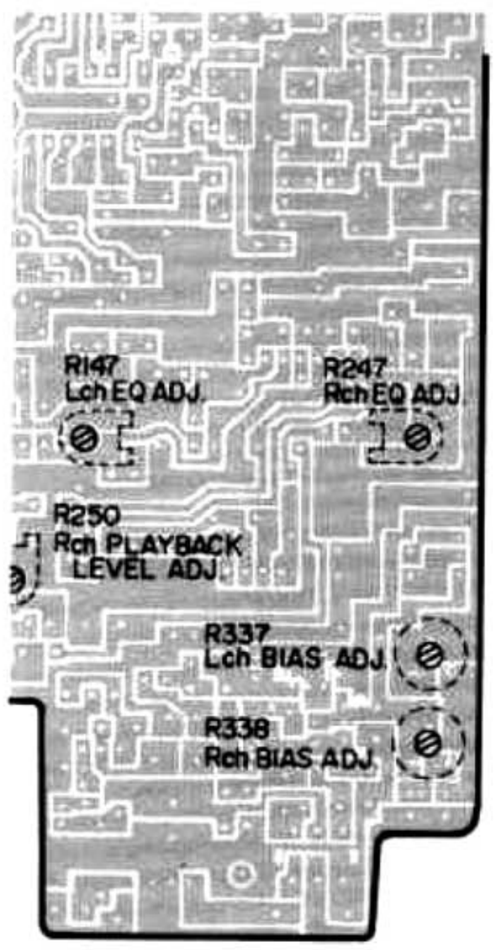
1. Power voltage:
   - 50/60 Hz voltage rated for the unit to be used in a market country.
   - DC 6 V
2. MONITOR switch position: TAPE
3. Output terminal: LINE Output
4. EQ switch position: 120 μS
5. Test tape: MTT-115C

PROCEDURES

1. Play the test tape MTT-115C. Let the 333 Hz signal level be reference as 0 dB.
2. Adjust R147 and R247 (3 kΩ each) for 10 kHz frequency response of 0 to 0 dB in reference to the 333 Hz signal level.
3. Proceed both for the right and left channels in the same manner.
4. Note that clockwise turning of R147 and R247 will increase the 10 kHz signal output level.

Mode: playback





5B-7 VU Meter Adjustment

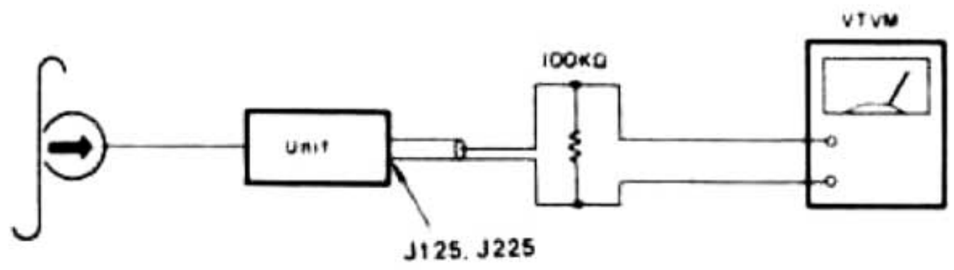
SET UP

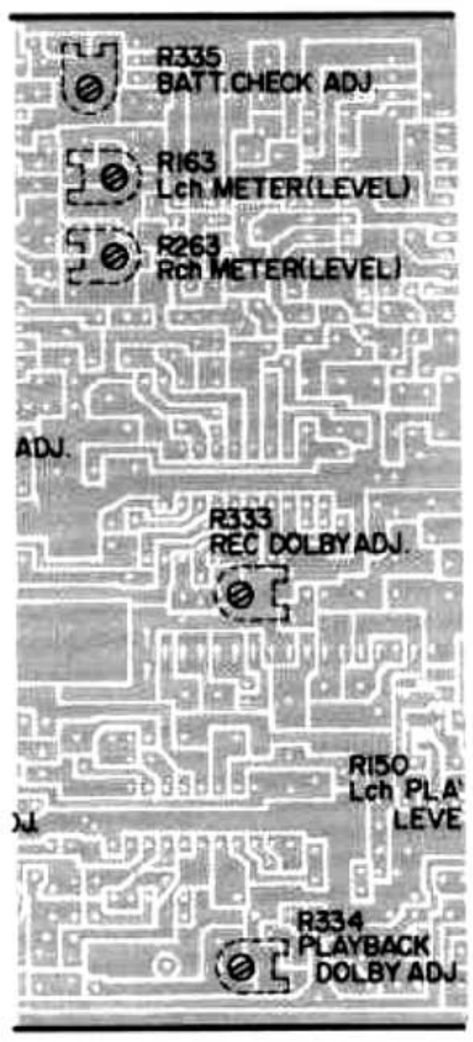
1. Power voltage:
   - 50/60 Hz AC voltage rated for the unit to be used in a market country.
   - DC 6 V
2. TAPE selector switch position: NORMAL
3. MONITOR switch position: SOURCE
4. Load: Measuring instrument input impedance.
5. Output terminal Used: Terminal No. 8, 9 of Dolby IC Q109

PROCEDURES

1. Play the test tape MTT-150.
2. Adjust R163 and R263 (2 kΩ each) until the VU meter pointer deflects to the DOLBY mark (DC) on the VU meter.

Mode: playback





5B-8 Recording Current Adjustment (Temporal)

SET UP

1. Power voltage:
   - 50/60 Hz AC voltage rated for the unit to be used in a market country.
   - DC 6 V
2. Input signal: 1 kHz, −60 dB signal
3. TAPE selector switch positions: NORMAL
4. Load: Measuring instrument input impedance

PROCEDURES

1. Stop the recording bias current oscillation by disconnecting the bias circuit +B resistor (R329).
2. Disconnect the recording head shielding leads (grounding leads) at J303 (L channel) and J303 (R channel). Insert a 1 Ω resistor between the respective leads and terminals. Connect a VTVM across each resistor. Set the CD-330 in the recording mode of operation. Adjust the semi-fixed resistors R132 (L channel) and R232 (R channel) until the VTVM reads 0.18 mV each channel.
3. Proceed both for the right and left channels in the same manner.
4. After adjustment, release the recording bias currnet.

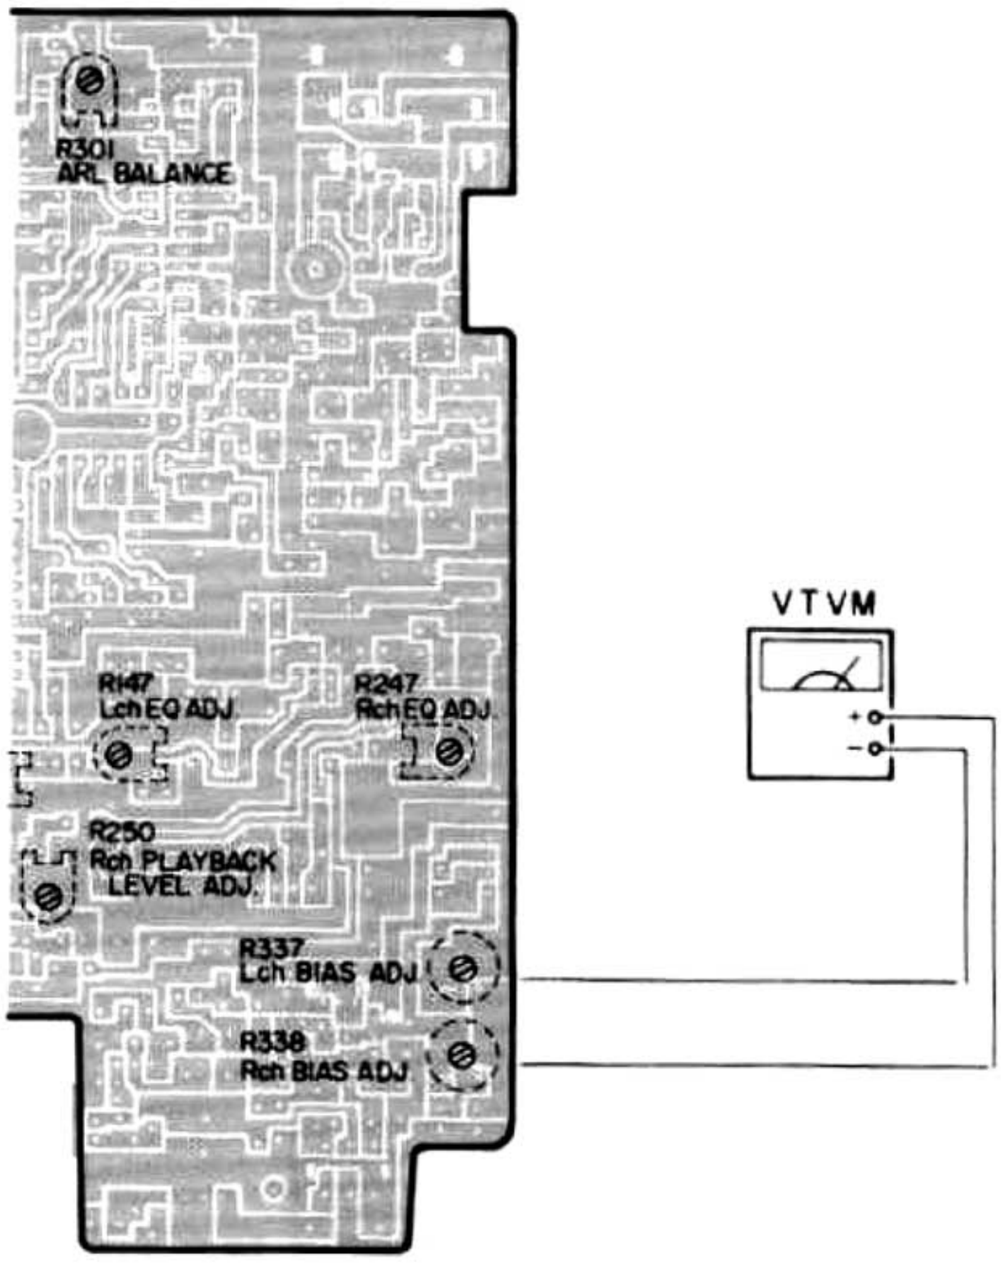
5B-9 Recording Bias Current Adjustment (Temporal)

SET UP

1. Power voltage:
   - 50/60 Hz AC voltage rated for the unit to be used in a market country.
   - DC 6 V
2. TAPE selector switch: NORMAL

PROCEDURES

1. Disconnect the recording head shielding leads (grounding leads) at J303 (L channel) and J303 (R channel). Insert at 1 Ω resistor between the respective leads and terminals. Connect a VTVM across each resistor. Set the CD-330 in the recording mode of operation. Adjust the semi-fixed resistors R337 (L channel) and R338 (R channel) until the VTVM reads 0.85 mV in each channel.
2. For the CD-330 equipped with the TAPE selector switch, make certain that the VTVM reads approximately 1.4 mV with it set to the CrO_2 position.



5B-10 Record-Playback Frequency Response Adjustment

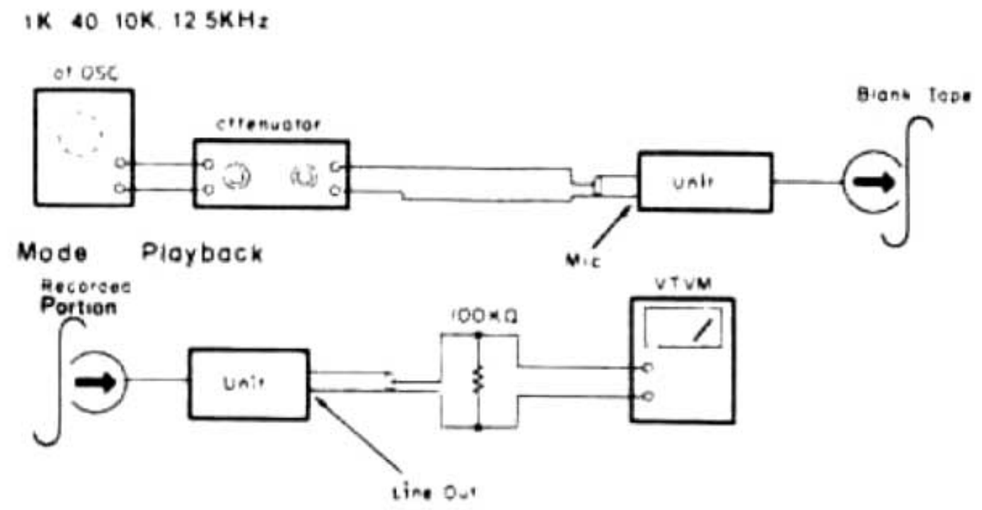
SET UP

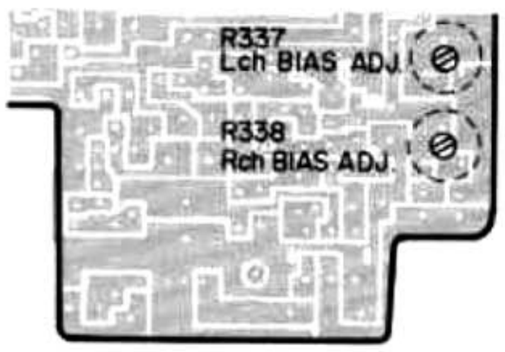
1. Power voltage:
   - 50/60 Hz AC voltage rated for the unit to be used in a market country.
   - DC 6 V
2. Input signal: 1 kHz, −60 dB with −20 dB referenced as 0 VU
3. TAPE selector switch: Fe-Cr
4. MONITOR switch position: SOURCE (at recording mode), TAPE (at playback mode)
5. Output terminal: LINE OUT
6. Load: Measuring instrument input impedance
7. Test tape used: SONY CS-30

PROCEDURES

1. Connect the input signal to the MIC terminal. Set up the CD-330 to the normal recording state.
2. In turn, reduce the input level by 20 dB with the use of the attenuator. Record the 1 and 12.5 kHz tones. Set the MONITOR switch to the TAPE position.
3. Play back the 1 kHz, 20 dB-down recorded tone as 0 dB. Adjust the semi-fixed resistors R337 (L channel) and R338 (R channel) until the response at 12.5 kHz is within ±1 dB as referenced to 0 dB (the response at 1 kHz).
4. Proceed both for the right and left channels in the same manner.
5. If the recording bias current is reduced in the above adjustment, be sure to measure the distortion.

Mode: record





5B-11 Record-Playback Output Level Measurement (at LINE OUT)

SET UP

1. Power voltage:
   - 50/60 Hz AC voltage rated for the unit to be used in a market country.
   - DC 6 V
2. Input: 1 kHz, −60 dB signal
3. Load: Measuring instrument input impedance
4. Level control position: SRL for recording operation
5. TAPE selector switch position: NORMAL, CrO_2 and Fe-Cr
6. MONITOR switch position: SOURCE
7. Measuring output terminal: LINE OUT
8. Cassette tape used: TDK AC-211, AC-511 and SONY CS-30

PROCEDURES

1. Record the 1 kHz, −60 dB signal in the normal recording state.
2. Set the MONITOR switch to the TAPE position while recording on the tape. Read the VTVM indication.
3. Proceed for the NORMAL, CrO_2 and Fe-Cr positions each in the same manner.
4. Proceed both for the right and left channels in the same manner.

STANDARDS

1. NORMAL position: 560 mV ±2 dB
2. CrO_2 position: 560 mV ±2 dB
3. Fe-Cr position: 560 mV ±2 dB

5B-12 Bias Trap Adjustment

SET UP

1. Power voltage:
   - 50/60 Hz AC voltage rated for the unit to be used in a market country.
   - DC 6 V
2. Tape selector switch position: Bias - High

PROCEDURES

1. Set up the unit in the recording mode of operation.
2. Turn the core of T302 until 100 ±3 kHz is obtained.
3. Connect the VTVM to LINE Output. Adjust L103 and L104 for minimum VTVM read.
4. In turn, connect the VTVM to LINE Output (R ch). Adjust L203 and 204 for minimum VTVM read.

CAUTIONS

1. If the leak bias is less than the specified value, the bias trap needs not to be adjusted since the adjusting coil is factory preset.
2. The adjusting rod used should be nonmetalic.

5B-13 Adjusting the Dolby Circuit

(1) Encoder circuit

1. Set the CD-330 in the SOURCE MONITOR.
2. Set the DOLBY NR switch to the OFF position.
3. Connect a 5 kHz signal to the Line input jack.
4. Adjust the input signal level until the output voltage at the negative (−) terminal of C122 or C222 is 23.5 mV.
5. Turn the DOLBY NR switch to the ON position.
6. Adjust the LAW CONT semi-fixed resistor the negative (−) terminal of C122 or C222 is 8±0.25 dB higher than the one obtained in Step 5 above.

(2) Decoder circuit

1. Set the CD-330 in the SOURCE MONITOR.
2. Set the DOLBY NR switch to the OFF position.
3. Connect a 5 kHz signal to the negative (−) terminal of C147 or C247.
4. Adjust the input signal level until the output voltage at Line Out L or R is 59 mV.
5. Turn the DOLBY NR switch to the ON position.
6. Adjust the LAW CONT semi-fixed resistor R333 until the output level at the negative (−) terminal of C154 or C254 is −8±0.25 dB higher than the one obtained in Step 5 above.

CAUTION

The Dolby system is full process type that has an independent encoder and decoder. It is therefore necessary to adjust both encoding and decoding characteristics.

5B-14 Playback Signal to Noise Ratio Measurement

SET UP

1. Power voltage:
   - 50/60 Hz AC voltage rated for the unit to be used in a market country.
   - DC 6 V
2. EQ switch position: 120 μS, 70 μS
3. MONITOR switch position: TAPE
4. Output terminal: LINE Output
5. Test tape used: MTT-112

PROCEDURES

1. Load the test tape MTT-112. Set up the unit to the normal playback state.
2. Read playback output as a 0 dB reference. Then playback blank tape and note the output level drop in dB.
3. Proceed both for the right and left channels in the same manner.
4. Repeat the above measurement for each tape selector switch position.

STANDARD

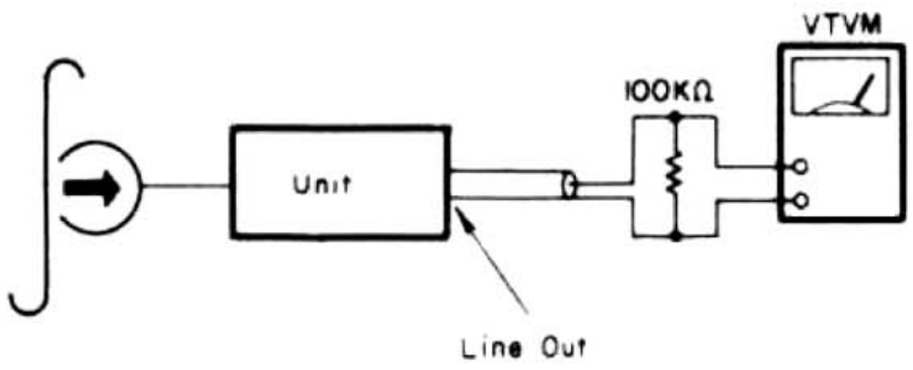
Greater than 50 dB

CAUTIONS

1. Arrange the unit power cord for minimum hum component.
2. Effect by induction noises should be minimized for the measurement.

Mode: playback

Tone 333Hz



5B-15 Playback Output Level Measurement

SET UP

1. Power voltage:
   - 50/60 Hz AC voltage rated for the unit to be used in a market country.
   - DC 6 V
2. EQ switch position: 120 μS
3. MONITOR switch position: TAPE
4. Output terminal: LINE Output
5. Test tape used: MTT-112

PROCEDURES

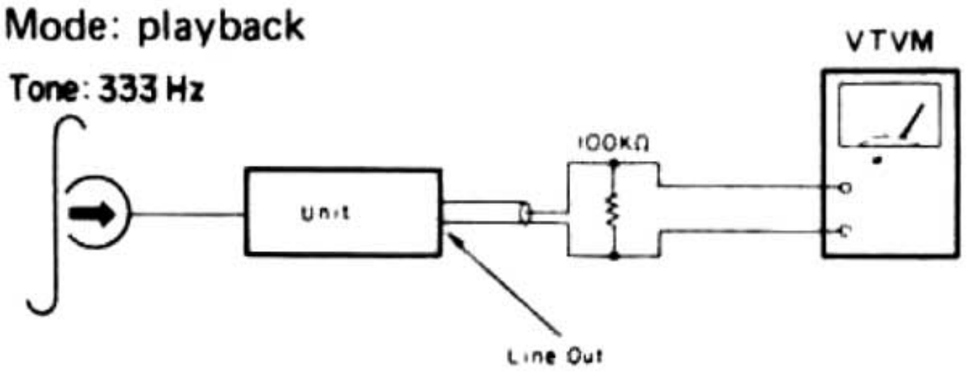
1. Play the tape back in the normal playback state. Read the VTVM indication.
2. Proceed both for the right and left channels in the same manner.

STANDARD

Within 860 mV

Mode: playback

Tone: 333 Hz



5B-16 Playback Frequency Response Measurement

SET UP

1. Power voltage:
   - 50/60 Hz AC voltage rated for the unit to be used in a market country.
   - DC 6 V
2. MONITOR switch position: TAPE
3. EQ switch position: 120 μS, 70 μS
4. Output terminal: LINE Output
5. Test tape used: MTT-116U (120 μS)
   MTT-116K (70 μS)

PROCEDURES

1. Play the test tape MTT-116U and MTT-116K back. Let the 31.5 Hz and 14 kHz output level be 0 dB as reference level.
2. Read the 31.5 Hz to 14 kHz output level differences from the 315 Hz 0 dB reference level.
3. Proceed both for the right and left channels in the same manner.
4. For the above measurement, use the test tape MTT-116U for the EQ 120 μS position and MTT-116K for the EQ 70 μS position.

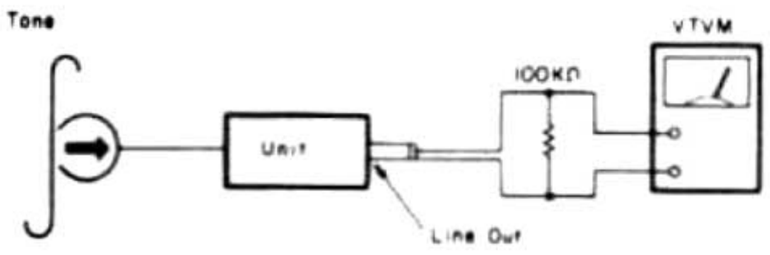
CAUTION

Since the test tapes used may involve same head azimuth difference, the head azimuth should be corrected at the highest frequency of each test tape before measurement.

STANDARD

In reference to the 315 Hz, 0 dB signal output level,
to at 40 Hz
to at 10 kHz.

Mode: playback



5B-17 Record-Playback Output Level Measurement

SET UP

1. Power voltage:
   - 50/60 Hz AC voltage rated for the unit to be used in a market country.
   - DC 6 V
2. Output terminal: LINE Output
3. Tape selector switch position: NORMAL, Fe-Cr and CrO_2
4. Input signal: 1 kHz −60 dB
5. Recording level control position: 0 dB
6. Test tape used: AC-211, CS-30 & AC-511

PROCEDURES

1. Record the 1 kHz −60 dB signal in the normal recording state.
2. Play the recorded signal back. Read the VU meter indication.
3. Proceed for the Fe-Cr and CrO_2 position each in the same manner.
4. Proceed both for the right and left channels in the same manner.

STANDARDS

1. NORMAL position: 560 mV ±2 dB
2. CrO_2 position: 560 mV ±2 dB
3. Fe-Cr position: 560 mV ±2 dB

5B-18 Record-Playback, Harmonic Distortion Measurement

SET UP

1. Power voltage:
   - 50/60 Hz AC voltage rated for the unit to be used in a market country.
   - DC 6 V
2. Input: 1 kHz, −60 dB signal
3. Playback Output level: Same as the recorded signal level
4. Load: Measuring instrument input impedance
5. Measuring output terminal: LINE Output
6. Cassette tape used: TDK AC-211, AC-511 and SONY CS-30
7. NOMITOR switch position: SOURCE (at recording mode), TAPE (at playback mode)

PROCEDURES

1. Record the 1 kHz signal in the normal recording state. Set the MONITOR switch to the TAPE position.
2. Play the recorded signal back in the normal playback state. Calibrate the harmonic distortion meter to 100% at the INPUT CONT. Adjust the adjusting knob for minimum meter pointer deflection, and read the harmonic distortion.
3. Proceed both for the right and left channels in the same manner.
4. Proceed for the NORMAL, CrO_2 and Fe-Cr positions each in the same manner.

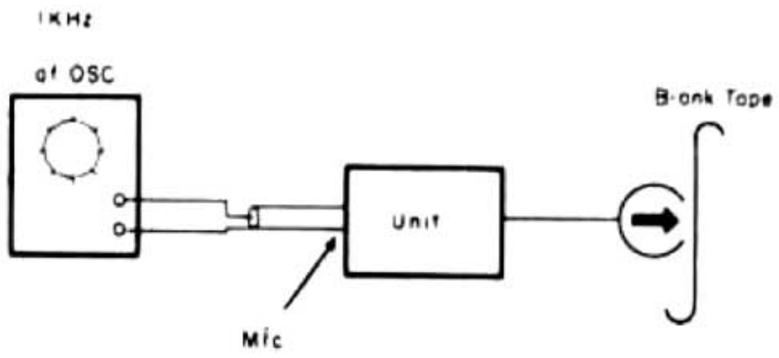
STANDARDS

1. Less than 2.5% for the NORMAL and CrO_2 positions.
2. Less than 3.5% for the Fe-Cr position.

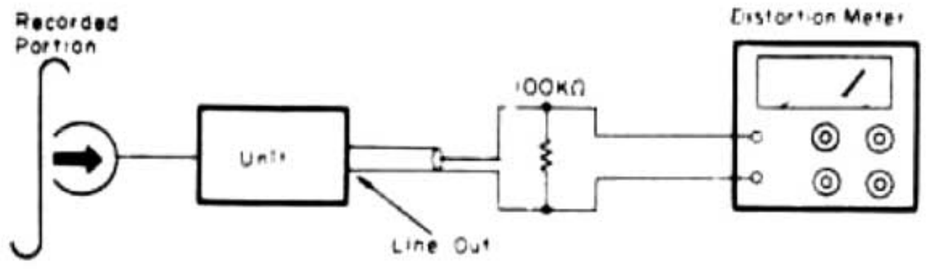
CAUTIONS

1. Be sure to demagnetize the heads as the measured values may deviate from the accurate values.
2. Note that excessive wow and flutter also causes deviation of the measured values.

Mode: record



Mode: playback



5B-19 Record-Playback Signal-to-Noise Ratio Measurement

SET UP

1. Power voltage:
   - 50/60 Hz AC voltage rated for the unit to be used in a market country.
   - DC 6 V
2. Input: 1 kHz, −60 dB signal
3. Playback output level: Same as the recorded signal level
4. Load: Measuring instrument input impedance
5. Measuring output terminal: LINE Output
6. Cassette tape used: TKD AC-211, AC-511 and SONY CS-30
7. MONITOR switch position: SOURCE (at recording mode), TAPE (at playback mode)

PROCEDURES

1. Record the 1 kHz signal in 3 dB above the normal recording state.
2. Disconnect the input signal from the microphone jack. In this state, record no signal.
3. Play the 1 kHz signal back in the normal playback state with the use of the I.E.C. A-Curve Filter. Let the output level be 0 dB as reference level. Set the MONITOR switch to the TAPE position.
4. Read difference between the recorded 0 dB reference output and no-signal output levels.
5. Proceed both for the right and left channels in the same manner.
6. Set the DOLBY switch to the ON position, and proceed with similar measurement.

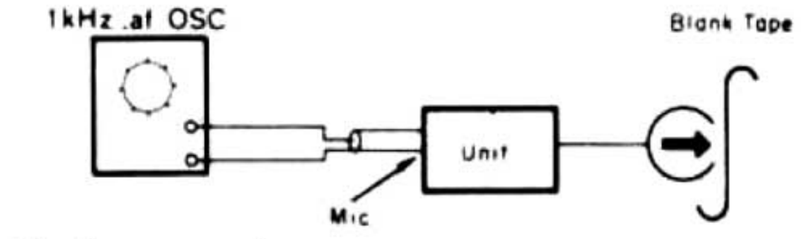
STANDARDS

1. Greater than 54 dB for the ON position of the DOLBY switch.
2. Greater than 50 dB for the OFF position of the DOLBY switch.

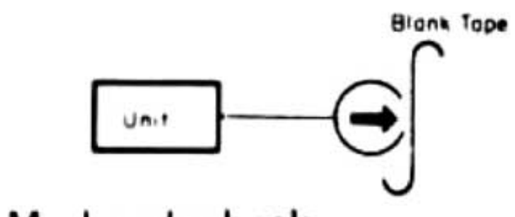
CAUTION

Arrange the CD-330 power cord for minimum hum component.

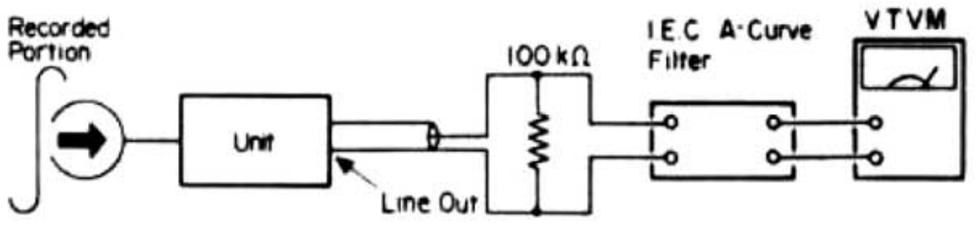
Mode: record



Mode: record



Mode: playback



5B-20 Record-Playback Frequency Response Measurement

SET UP

1. Power voltage:
   - 50/60 Hz AC voltage rated for the unit to be used in a market country.
   - DC 6 V
2. Input: 1 kHz, −60 dB signal with −20 dB as 0 VU
3. Playback output level: Same as the recorded signal level.
4. Load: Measuring instrument input impedance
5. Measuring output terminal: LINE Output
6. Cassette tape used: TKD AC-211, AC-511 and SONY CS-30
7. MONITOR switch position: SOURCE recording mode), TAPE (at playback mode)

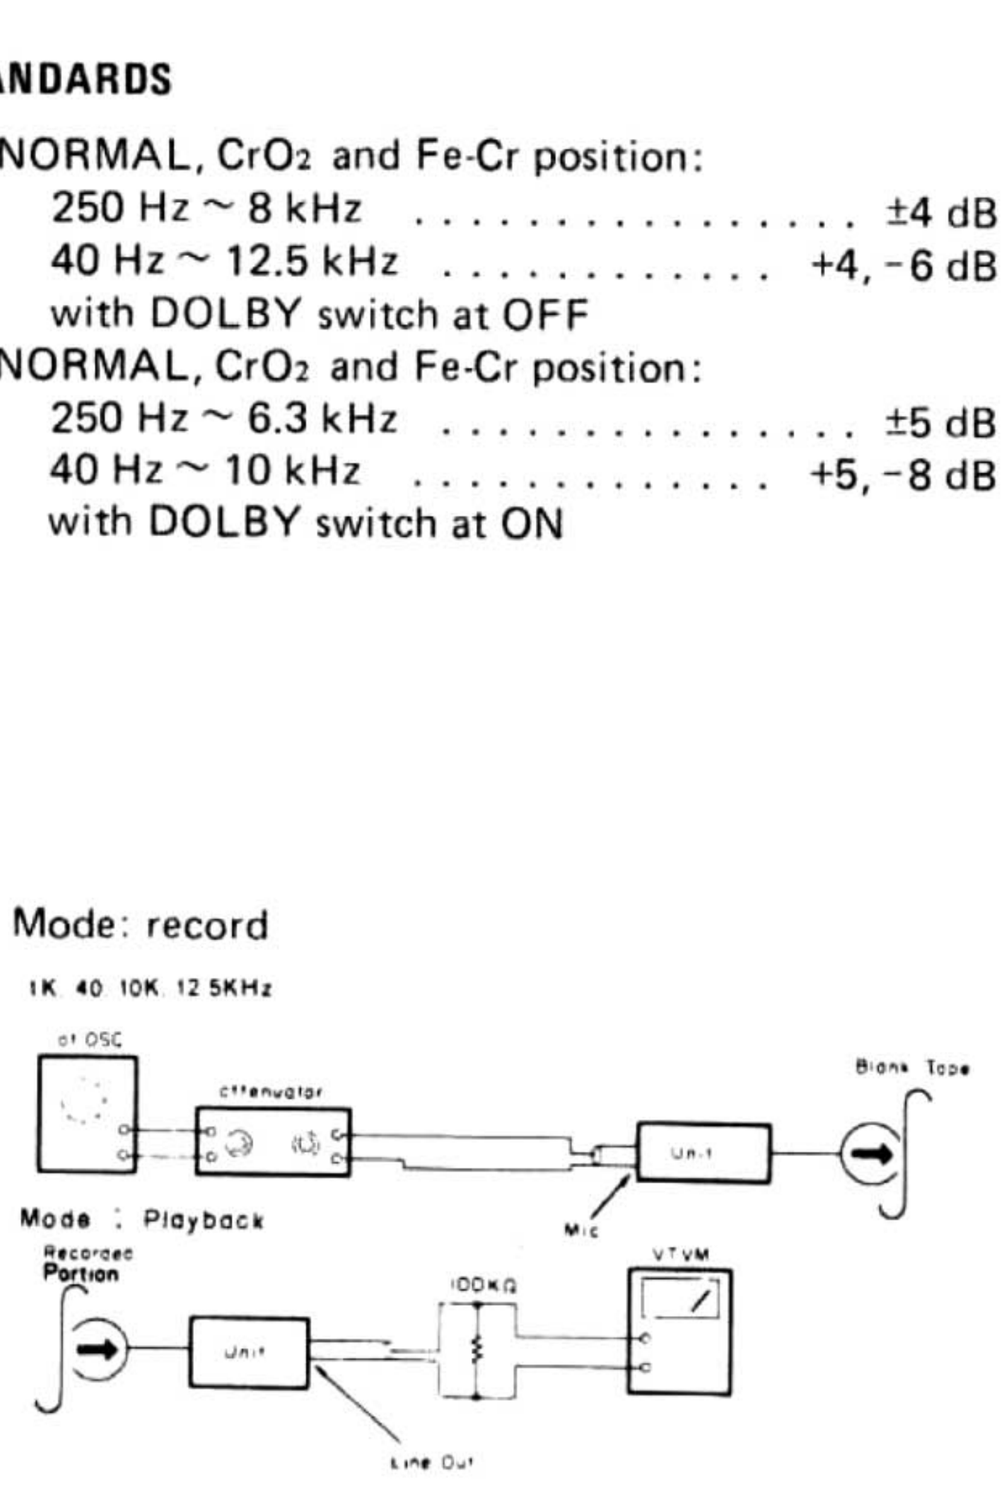
PROCEDURES

1. Record the 1 kHz signal in the normal recording state. In turn, reduce the input level by 20 dB with an attenuator. Then, record the 1 kHz, 40 Hz, 10 kHz, 12.5 kHz and 14 kHz signals.
2. Play the recorded 1 kHz signal back in the normal playback state. Set the MONITOR switch to the TAPE position.
3. Let the 1 kHz, −20 dB-down signal level be 0 dB as reference level. Read difference of the 40 Hz, 10 kHz, 12.5 kHz and 14 kHz signal output levels from the 1 kHz signal 0 dB reference level.
4. Proceed for the NORMAL, CrO_2 and Fe-Cr positions each in the same manner.
5. Proceed both for the right and left channels in the same manner.

STANDARDS

1. NORMAL, CrO_2 and Fe-Cr position:
   250 Hz ~ 8 kHz . . . . . ±4 dB
   40 Hz ~ 12.5 kHz . . . . . +4, −6 dB
   with DOLBY switch at OFF
2. NORMAL, CrO_2 and Fe-Cr position:
   250 Hz ~ 6.3 kHz . . . . . ±5 dB
   40 Hz ~ 10 kHz . . . . . +5, −8 dB
   with DOLBY switch at ON

Mode: record



5B-21 Erasing Effect Measurement

SET UP

1. Power voltage:
   - 50/60 Hz AC voltage rated for the unit to be used in a market country.
   - DC 6 V
2. Input: 100 Hz, −60 dB signal with +10 dB as 0 VU.
3. Playback output level: Same as the recorded signal level.
4. Load: Measuring instrument input impedance
5. TAPE selector switch position: NORMAL, CrO_2 and Fe-Cr
6. MONITOR switch position: SOURCE (at recording mode), TAPE (at playback mode)
7. Cassette tape used: TDK AC-211, AC-511 and SONY CS-30
8. Filter used: 100 Hz band-pass filter.

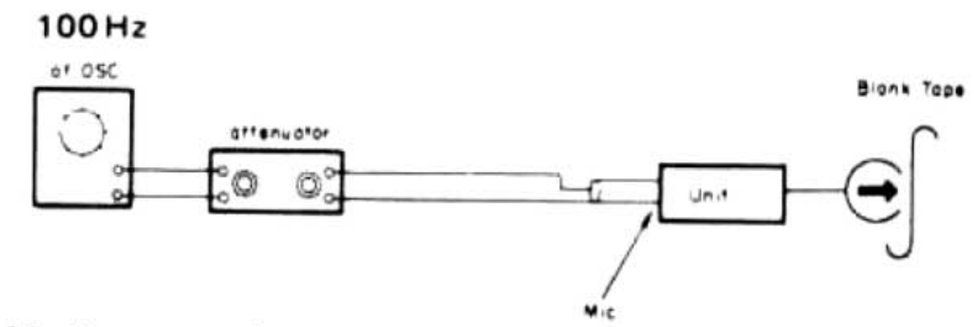
PROCEDURES

1. Record the 100 Hz input signal in the normal recording state.
2. In turn, increase the input level by 10 dB with the attenuator, and record it.
3. Rewind a half portion of the 10 dB-up tape and record in no-signal state, or erase, on the portion with the input signal disconnected from the microphone jack.
4. Play back in the normal playback state the input signal recorded in the normal recording state. Set the MONITOR switch to the TAPE position.
5. In turn, let the 10 dB-up recorded signal level be 0 dB as reference level. Read difference of the level at the erased portion from the 0 dB reference level.

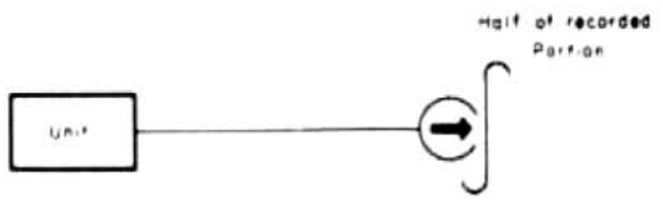
STANDARD

Greater than 55 dB.

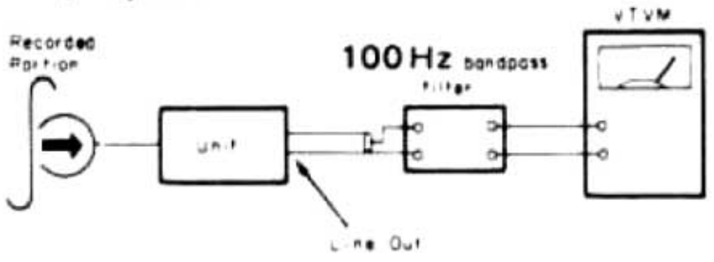
Mode: record



Mode: record



Mode: playback



5B-22 Leak Bias Measurement

SET UP

1. Power voltage:
   - 50/60 Hz AC voltage rated for the unit to be used in a market country.
   - DC 6 V
2. Input: 1 kHz, −60 dB signal
3. Load: Measuring instrument input impedance
4. Level control position: SRL
5. TAPE selector switch position: NORMAL CrO_2 and Fe-Cr
6. MONITOR switch position: SOURCE

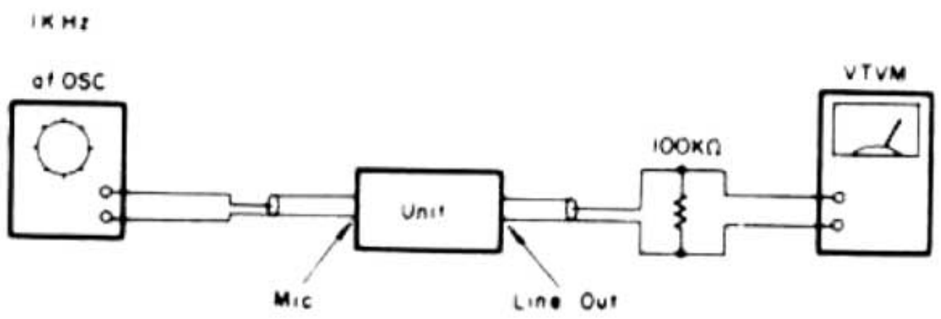
PROCEDURES

1. Record the 1 kHz input signal in the normal recording state. Let the monitor output level at the LINE OUT terminal be 0 dB as reference level. Read difference of the output level having the input signal disconnected from the 0 dB reference level.
2. Proceed both for the right and left channels in the same manner.

STANDARD

Lower than −44 dB

Mode: reocrd



5B-23 Cross Talk Measurement

SET UP

1. Power voltage:
   - 50/60 Hz AC voltage rated for the unit to be used in a market country.
   - DC 6 V
2. TAPE selector switch position: NORMAL
3. MONITOR switch position: TAPE
4. Load: Measuring instrument input impedance
5. Measuring output terminal: LINE Output
6. Test tape used: MTT-121

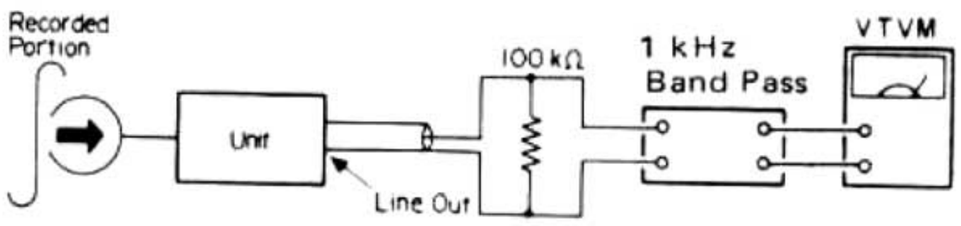
PROCEDURES

1. Playback the R channel on the side A of the test tape MTT-121. Assure that the output response at 1 kHz be 0 dB as reference level.
2. In turn, playback the R channel on the side B of the test tape MTT-121. Read the output level deviated from the 0 dB reference level.

STANDARD

Less than 50 dB

Mode: playback



5B-24 Channel Separation Measurement

SET UP

1. Power voltage:
   - 50/60 Hz AC voltage rated for the unit to be used in a market country.
   - DC 6 V
2. TAPE selector switch position: NORMAL
3. MONITOR switch position: TAPE
4. Load: Measuring instrument input impedance
5. Measuring output terminal: LINE Output
6. Test tape used: MTT-141

PROCEDURES

1. Playback the L channel of the test tape MTT-141. Assume that the output reference at 1 kHz be 0 dB as reference level.
2. In turn, playback the L channel. Read the output level from the 0 dB reference level.

STANDARD

Less than 34 dB

Mode: playback
